## Introduction

Thank you for using ILDVR-3000H4C/H4C+/H4F/H4D DVR system. This operation manual illustrates how to set up ILDVR-3000H4C, 3000H4C+ and ILDVR-H4F system, explains each individual icon function and demonstrates how to use the system effectively in a stable environment.

Prior to install/utilize the system, operators of ILDVR-3000H4C/H4C+/H4F/H4D DVR systems should go through this manual thoroughly. Local suppliers may support them in due course.

## Version Difference

Version 8.0s is standard display. Image ratio is 4:3. Computer display property must be set to 1024×768 pixels at 32 bit true color.

Version 8.0w is wide screen display. Image ratio is 16:9. Computer display property must be set to 1680×1050 pixels at 32 bit true color.

All functions and operations are exactly the same between Version 8.0s and Version 8.0w. ILDVR Server v8.0s supports both ILDVR LiveCenter v8.0s and ILDVR LiveCenter v8.0w. ILDVR Server v8.0w also supports both ILDVR LiveCenter v8.0s and ILDVR LiveCenter v8.0w.

## System key features

- Hardware supported H.264 compression, for highest video quality, least hard disk space usage, and adapts to low and high speed network access
- Realtime full-motion video-capture & display (Max. 64 channel video input)
- Realtime high-speed recording: Max. 30 frames/sec per channel
- Synchronous audio monitor and record (optional)
- Motion detect (Whole area or max. 12 detection zones per channel)
- Always record (continuous) and event record (Motion detection or external sensor)
- Electron Map pop-up when alarm is triggered.
- Private image mask

- Alarm camera pop-up when alarm is triggered.
- System operating and alarm logging
- Pre-alarm recording
- Remote recording
- Remote RELAY OUT (DI/DO) control and manage.
- Automatically send email out when alarm is triggered
- Network support : Remote access via LAN, Ethernet, PSTN, ISDN, ADSL
- Convenient PTZ control on screen and keyboard
- Instant playback both server and client
- IP Matrix technology applied to manage multiple connections between Server and LiveCenter
- TV-out matrix function supported on both Server and LiveCenter
- Search/playback by date/time directory (random-access)
- Smart Search function
- VOIP function

# Chapter 1

## ILDVR Server

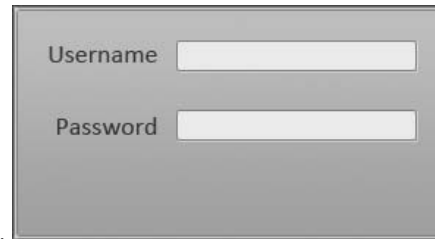

### 1 Start Up

- 1 Before you press the **DVR** power button, please ensure all connector interfaces are firmly installed.
- 2 Press the **DVR** system power button, the Power LED turns on, the application interface will display after about 1 minute when it completes the system self-check. It takes more time to load the application program if you have more encoding channels.

If ILDVR auto startup shortcut has been deleted from startup menu, please double click icon  windows desktop. The main application interface is as follows:

The interface displays a 4x8 grid of camera feeds. The top row includes various outdoor and indoor scenes. The second row contains two 'VIDEO LOST' messages. The bottom row features eight 'ILDVR' logos. On the right side, there is a system status panel with a globe icon, date 'Sat. Dec 09, 2006', time '19:52:04', and 'FreeHDD 7487M'. Below this is a 'Sensors' section with a 4x4 grid of indicators and a 'Relay out' section with another 4x4 grid. At the bottom right, there is a circular navigation pad and a set of icons. At the bottom left, there is a legend for camera channels (C1-C64) and a row of zoom buttons (x1, x4, x9, x13, x16, x20, x25, x28, x33, x36, x40, x49, x64).

## 2 Main Interface

A login dialog box with a grey background and a thin border. It contains two text input fields. The first field is labeled "Username" and the second is labeled "Password".

2.1 **Login:** Press button , then the dialog box will display.

Input your User ID and password then press ok.

Default User ID is “admin”, no password.

**Note: If the DVR system is not being configured as User Manage Mode, the lock button will be unusable.**

2.2 **Show tips:** when the mouse moves close to, or stops at a hot button, a short description tip will show up immediately.

2.3 **Full Screen Mode:** double click mouse or right click mouse will change display mode to full screen mode, click again to revert back to its original mode.

2.4 **Recording status:**

- a.  This icon indicates that the system is recording normally (Always Record)
- b.  This icon indicates that the system is recording in motion detect mode (Motion Record)
- c.  This icon indicates that the system is recording in sensor detect mode (Sensor Record)
- d.  This icon indicates that the system is recording manually (Manual Record)
- e.  This icon indicates that the system is not recording (No Record)

2.5 **Change monitor mode:**

a. Split mode shift button

b. Split screen scanning mode on.

2.6 **Hot control buttons:**

Playback button: Click to enter log file searching mode.

Setting button: Click to enter system setting interface.

Remote Talk button: Click to begin remote talk.

Picture capture button

Emergency record button

Manual record button

Speed dome control panel on/off button

Alarm control button

CD/RW program shortcut. Refer to 11.3

Digital Matrix Group switch button

Motion Detect setup button

Display Electron Map button

Duty hand over and take over button

View Log button

Lock button: Click to lock or unlock system.

### 2.7 Date and time:

Display date, time and hard disk free space status.

### 2.8 Sensor Panel:

Gray color number button means that sensor or DO port is not working, light purple color number button means that sensor or DO port is working in checking mode, dark purple color number button means that sensor or DO port is working in alarming mode.

### 2.9 Speed Dome Panel:

See **Appendix D**. This speed dome panel only appears when the current camera is configured to use High

Speed Dome camera.

### 2.10 Adjust color and voice:

- Brightness     Adjust settings by drag & drop the red scroll bar, click the right icon to restore default value.
- Contrast
- Tone
- Saturation
- Voice

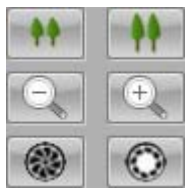

**2.11 PTZ control:**

 Click this PTZ button to open the PTZ Control panel.

 Click this PTZ button to close the PTZ Control panel.

a.  Light on/off button

b.  Blower/windshield wiper on/off button.

c. 

Zoom in/Zoom out
Focus in/Focus out
Iris change

d. Click to change PTZ directions. Circle button  is for auto scan.

e.  Display the active channel number.

## 2.12 Exit system

a. By clicking this "Exit" button this will display next dialog interface.

b. Click "OK" to quit ILDVR system.

## 3 System Configuration

### 3.1 ILDVR System Setup

In the main interface click button  to enter DVR system setup interface

# System Configuration

### 3.1.1 **System** Set system parameter

▼ System

Camera channel	64	Sensor input	16	Sensor output	8	
PTZ use port	COM1	Audio monitor	Not Use	Use electron map	Use	
Alarm use port	COM2	Save log day	30	Splitter auto change	3 sec	
DI/DO device	ILDVR-1608	Beep while alarm	Not Use	Language	English	
Record save disk	D:\	Save record mode	Record Auto Repeat	Key stroke	Not Use	
Modify HDD remain space(MB)			C:\	1000	Alarm popup interval	sec

- Camera channel** 64 Display the total number of channels.
- Sensor input** 16 Display the number of sensors (DI).
- Sensor output** 8 Display the number of alarms (DO).
- PTZ use port** COM1 Select PTZ connecting port.
- Audio monitor** Not Use Select monitoring audio or not.
- Use electron map** Use Select displaying Electron Map or not when there is an alarm.

- g. **Alarm use port**  Select sensor/alarm driver connecting port.
- h. **Save log day**  Log save days max 99 days .
- i. **Splitter auto change**  sec Set auto-split changing speed (max 180 Sec).
- j. **DI/DO device**  Select alarm driver type.
- k. **Beep while alarm**  The mini-speaker connecting the Mother Board beep or not when there is an alarm.
- l. **Language**  Change language setting
- m. **Record save disk**  Select the first disk partition from which the DVR saves data.
- n. **Save record mode**  Select record mode. If “Record Automatic Repeat” is selected, the ILDVR system will automatically overwrite the first day recorded data once storage space is lower than 1000MB. If “Record Manual Repeat” is selected, the ILDVR system will stop recording and give a warning message when the hard drive space is lower than 1000MB.
- o. **Key stroke**  Prevent using function keys of Ctrl, Alt, Del and F4
- p. **Modify HDD remain space(MB)**   Keep this free size for system use on each disk partition.
- q. **Alarm popup interval**  sec Time in seconds of alarm popup frequency

### 3.1.2 **Network**

Remote connection	<input type="text" value="Use"/>	Listen port	<input type="text" value="4,500"/>	Web listen port	<input type="text" value="80"/>
Alarm connect to IP	<input type="text"/>	Connect port	<input type="text" value="4,600"/>		

- a. **Remote connection**  Select to "USE" or "NOT USE" a network connection.
- b. **Alarm connect to IP**  Assign a network computer (IP address) to receive alarm message when there is an alarm. The alarm triggered channel image will automatically display on the computer that runs the ILDVR LiveCenter software.
- c. **Listen port**  TCP/IP port used for remote monitor and remote search
- d. **Connect port**  TCP/IP port used for alarm message
- e. **Web listen port**  TCP/IP port used for web client (IE browser)

**Note:**

1. **Alarm connection is possible only if the assigned computer is running ILDVR LiveCenter Software.**
2. **ILDVR system will automatically select free channels to display the alarm triggered channel image. If there is no free channel for use, the alarm connection will fail. So if you want to use this feature, please make sure to leave at least one channel free when running ILDVR LiveCenter program for alarm connection use.**

3.1.3 **▼ Boot Mode** For system stability, the system can be set to restart automatically.

- a.  Exit to Windows Exit to windows desktop.
- b.  Exit and shutdown Exit and shut down the computer.
- c.  Auto shutdown  H  M Select auto shutdown time.

Auto reboot date(Mon.~Sun.)        Select auto restart days.

Reboot at  H  M Set auto-restart time.

- d.  Auto hide Minimize after running program
- e. Time format  System time format setting

### 3.2 Camera Setup

## Camera Setup

Dec 10, 2006

18:35:53

## ▼ Individual Setup

### 3.2.1

Camera parameters can be set individually.

Select camera	Camera01	Fix position	Camera01	If use	Use	Swap file	30 (MB)
Compression	VBR	Record frame	26	Date OSD	YES	Netsend quality	Better
Image quality	Better	Image size	352 * 288	OSD contrast	0	Netsend size	352 * 240
Mask file				OSD POS	TL-Corner	Netsend frame	25
PTZ address	1	Protocol type	Pelco-D(H)	Append	Normal	Save I-frame only	Not Use
				Copy to	All Camera	COPY	

Select camera  Select channel number to change settings.

Fix position  Channel OSD. (OSD stands for On-Screen Display), input your description. e.g. Entrance Door

If use  Select this camera to use or not.

Swap file  (MB) Set the video data file size that saves in hard disk. Recorded video does not save to HDD immediately, it caches in RAM. Only when the cached video file reaches the size that you set the ILDVR system saves this Swap File to HDD. For easy backup purposes don't set too large file size.

Compression  Compression  Set VBR/CBR record mode, VBR= Variable bit rate, CBR= Constant bit rate. Strongly recommend setting for best network performance.

Image quality  Select record image quality.

Image quality  This setting only applies with CBR mode.

Record frame  Select record frame rate (fps), only support in VBR mode.

Image size  CIF resolution

Date OSD  Date OSD  Select record OSD date & time in image or not.

OSD contrast  OSD POS  Set OSD display brightness & position.

Mask file  Implement watermark feature, the logo picture (e.g. above mark.bmp) must be painted/edited to

fulfill the following requirements:

A: width and length must be multiple of 8 in pixel such as 96×72 pixel

B: width and length must be equal or less than 128 pixels

C: The watermark picture must be saved as 24bit BMP file

PTZ address  Select PTZ driver address.

Protocol type  Select PTZ protocol type.

Append  Select PTZ installation mode. Normal install or reverse install, selecting reverse will change the moving direction of the PTZ.

Save I-frame only  Save I frame, no compression

Netsend quatlity  Image quality sending to network

Netsend size  Image resolution sending to network

Netsend frame  Frame rate sending to network

Copy to   Save the current camera settings to all cameras or selected camera

### 3.2.2 Cameras must be grouped to work according to the time lists of each group.

**Note: If you setup groups with conflicting cameras, then only the last setup is going to work.**

Select camera group  Select group number.

This group include          
        Add camera to selected group.

Record mode  Select video and audio record mode.

Pre-alarm record  Select the start time of record when there is an alarm. When ILDVR system is in Motion Detect mode or Sensor Detect mode, it can record video before the alarm was triggered.

Post-alarm record  Select the end time of record when there is an alarm. When the system is in Motion Detect mode or Sensor Detect mode, it can record video after the alarm ends.

### 3.2.3 Schedule Setup (Example for above figure)

Tips: One block of pane  means half an hour. First click record mode icon , then click schedule diagram, holding down the mouse and moving it can select large area (Drag & Drop).

- Normal Record (Red):** ILDVR System is always recording video. (e.g. Sun. Fri. Sat.)
- Motion Detect (blue):** ILDVR System begins to record video only when it detect moving object. (e.g. Mon.)  
Click "Motion Detect" icon, then select your schedule time by drag & drop, for example, the above picture means: Monday is motion detect record, Sunday is normal record, but in TUE, WED and THU from 3:30 to 11:00 is sensor record, 14:00 to 22:30 is both motion detect record mode and sensor detect record mode, other time is normal record.
- Sensor Record (Yellow):** ILDVR System begins to record video only when there is the sensor alarm is triggered. (3:30 to 11:00 in Tue. Wed. Thu.)  
**Note: The time setting must correspond with Check Alarm settings in SENEOR SETUP, otherwise it will not work properly.**
- Motion or Sensor Record (Green):** Combine with above b and c function.
- Not Record (gray):** ILDVR System doesn't record video.

### 3.3 Sensor Setup

This function needs an ILDVR-1608 or ILDVR-0808 alarm controller to support.

# Sensor Setup

Dec 10, 2006

19:17:48

## ▼ Alarm & Sensor Setup

## ▼ Alarm & Sensor Setup

3.3.1

Select sensor  Select sensor number/port for setting.

If use  Select this sensor port to use or not.

Sensor position  Input your description of this sensor.

Linkage speed dome after alarm 

1	2	3	4	5	6	7	8	9	10	1
33	34	35	36	37	38	39	40	41	42	4

 Select which Speed Dome corresponds with this sensor alarm.

Speed dome preset  Select linkage Speed Dome preset number. Speed Dome will automatically move to this preset number when there is an alarm. (Applicable only if Speed Dome is installed).

**Noted: ILDVR-SC series of speed dome use preset #1 to open configure menu. If you use Sensor Alarm and Speed Dome Linkage feature, please avoid using speed dome preset #1, otherwise the camera configure menu will popup frequently. See Appendix D**

DO Control Port  Select relay out port /DO port to name it in below input box.

Fix position  This description will show on screen as tips on the Relay Out control panel.

## ▼ Group Setup

3.3.2

Sensors can be grouped as well as cameras.

Group  Select group number

NC/NO  Select N/C or N/O alarm type.

Save log  Write alarm log or not.

Linkage after alarm end  Stop  Stay  Delay  sec

Select ILDVR System alarm linkage mode after an alarm time-out. “Stop” means the system stops the alarm alert immediately after the alarm driver stops. “Stay” means the system will not stop alarm alert after the alarm driver stops. “Delay” means the system will delay stopping the alarm alert at your preset time interval after the alarm driver stops.

Select sensor

Add sensor to selected group.

Linkage camera

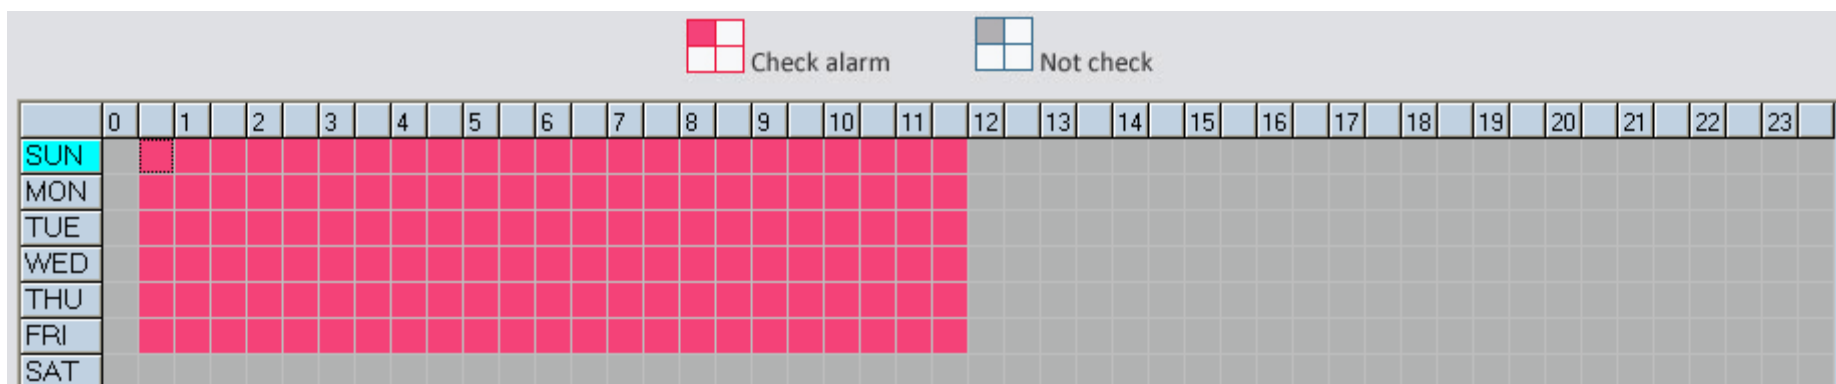

Select which camera responds with this sensor group. They will start recording and auto-connect the remote computer that runs LiveCenter when there is an alarm.

Linkage alarm out

Add alarm devices (alarm out port) to this group. e.g. siren, light. All connecting devices will send alarm message when there is an alarm.

### 3.3.3 Schedule Setup (Example for below figure)

- a. **Checking Time (Red):** ILDVR System responds with sensor in this time. (00:30 to 12:00 in Sun. to Fri.)
- b. **Not Checking Time (gray):** ILDVR System doesn't respond with sensor in this time.

**Note: If you setup groups with conflicting camera, then only the last setup is going to work.**

### 3.4 Linkage and Backup

#### 3.4.1 Auto Backup Settings

Auto backup means the ILDVR System will record data to two different folders at the same time. The first is in the default path. It will be overwritten in the AUTOMATIC REPEAT CYCLES. The other copy is in your assigned folder. ILDVR System will not delete them in the AUTOMATIC REPEAT CYCLES.

Select auto backup camera

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32

### ▼ Motion Detect Linkage

#### 3.4.2

Select camera

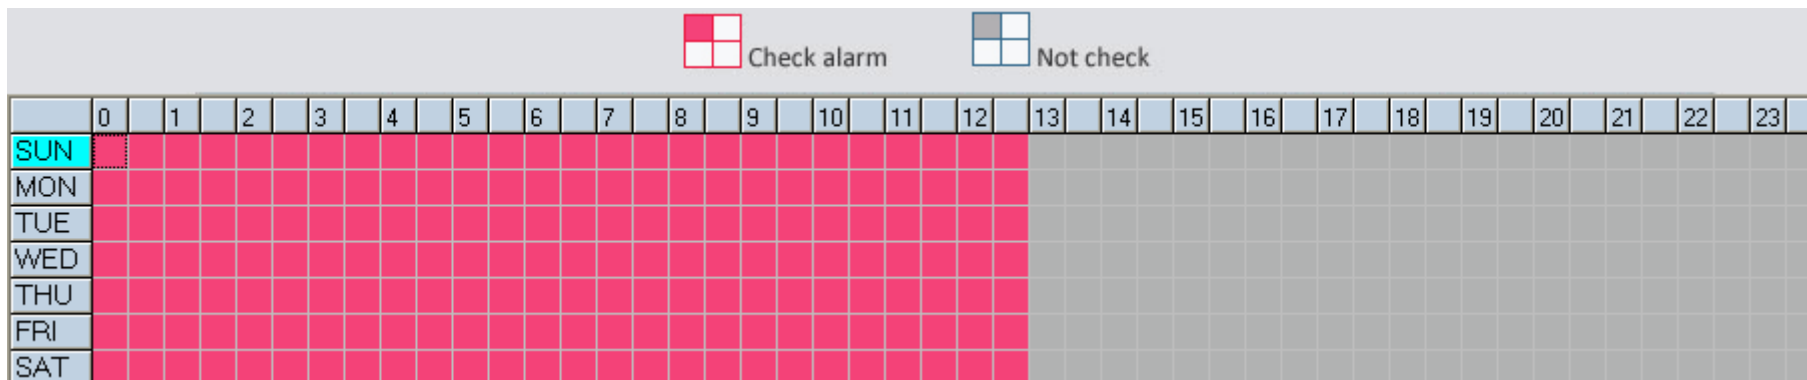

Select camera to set. This camera will send alarm to D/O port when it detects any moving object (Motion Detect).

Alarm send to net

Select to send alarm video to ILDVR LiveCenter or not.

Motion alarm DO port

Select the DO port that corresponds with above alarm camera. All connecting devices will send alarm message when motion is detected.

#### 3.4.3 Schedule Setup (Example for above figure)

- a. **Checking Time (Red):** ILDVR System responds with Motion Detect and sends the alarm message only at this time. (Every day 00:00 to 13:00)
- b. **Not Checking Time (gray):** ILDVR System will not respond with Motion Detect at this time.

**Note:**

**Check Alarm is different from Motion Detect Record. It is only for alarm setting. It triggers an alarm and sends an alarm message out.**

### 3.6 Matrix Setup

# 3000H4D Card Matrix Output Setup

## ▼ Matrix Output Setup

Matrix group

Video output port

Video output standard

Video view mode

1	2
3	4

Video switch interval

Viewing window

Map camera to above viewing window

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32
33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64

Dec 09, 2006

19:56:49

**This function need ILDVR-3000H4D decode card to support.**

Matrix group  Save matrix settings in groups

Video output port  Set display parameter with the next 5 settings for “video out port 1”. Finish setting all parameters, then change to video out 02 port, repeat your setup, and so on.

Video output standard  Select out-going video format to match the monitor video standard (TV)

Video view mode  Select the following split mode on screen. From left to right is 1-window, 2-widow, 4-window, 9-window, 13-window and 16-window.

Video switch interval  When the cameras exceed the video-out ports, they must be switched to be displayed on monitors, e.g., if cameras 1,5 is assigned to window 1, then, cameras 1,5 will be switched in 3 sec. intervals. Set the switch time in second here.

Viewing window  Assign that which window in above “Video view mode” to display which camera in below camera list.

Map camera to above viewing window

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51

In matrix system every camera has 2 channels, one is called “Main camera channel” and the other called “Sub camera channel”, that means every camera can be viewed at 2 video-out ports at the same time. For example if you assign camera1 with “Main camera channel” to video-out port1 at any window then you can assign camera1

with “Sub camera channel” to video-out port2 at any window. Each camera can be assigned 2 times only.

### 3.7.1 ▼ User Information

Use password

Check to enable User Manage mode and activate the lock button  in main interface. Only authorized users can log into ILDVR System at User Manage Mode.

Select user

Select existing user.

System name

Input new User ID in this box.

Note name

Input your description of this user.

Password

Set new user or selected user's password.

Confirm Password

Confirm password again.

Manage right

Select user type. Only Administrator can enter User Manage Interface and have the power of user management.

Add user 

Click icon  to add a new user. Maximum is 16 users per system.

Delete user 

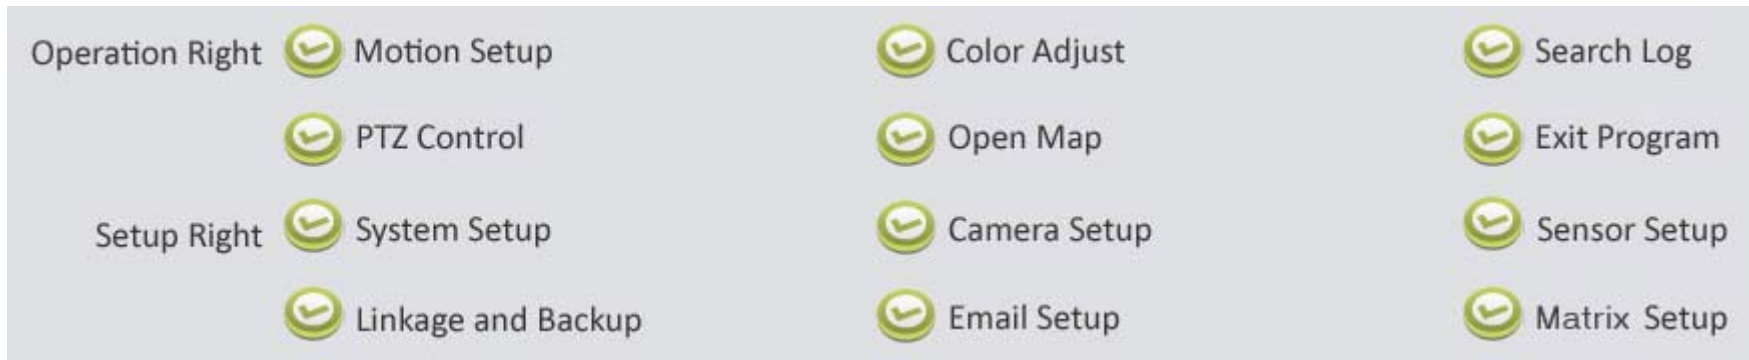

Click this icon  to delete the selected user.

### 3.7.2 ▼ User Right Setup

Appoint which camera can be monitored video, audio and playback by above user.

Click the icon to set selected user rights.

3.8  End and save setting. Exit to main interface.

## 4 Motion Detect Record Setting

4.1 Set motion detect group: Select which camera works in motion detect mode, add them to a group.

4.2 Set schedule for this group (refer to 3.2.3 Schedule setting).

4.3 Set motion detection area and sensitivity of each channel.

In main interface press button  will display the following interface. Holding the left button of your mouse, drag & drop a rectangle area in the image. You can set up to 12 motion detect zones in one camera. Adjust the motion detect sensitive degree for each camera in this interface. Default is full image area setting.

## Motion Detect Setup

Camera

Sensitivity

Test

Add Mask

Del Mask

Exit

## 5 System Alarm Setting and Alarm Control

### 5.1 Motion Detect Alarm Configuration

Steps:

- 5.1.1 Set motion detect camera checking-time table one camera at a time. Refer to 3.4.2 to 3.4.3 “Motion Detect DO Linkage”
- 5.1.2 Set motion detection area and sensitivity of each camera. Refer to 4.3.
- 5.1.3 Configure alarm patterns such as Alarm to DO, Alarm to LiveCenter, Alarm Popup Image, Alarm Send Email, Alarm Popup Electron Map.

### 5.2 Sensor Alarm Setting and DI/DO linkage

This function need ILDVR-1608 or ILDVR-0808 alarm controller to support. Steps:

- 5.2.1 Configure installing alarm controller and connecting port.

- 5.2.2 Configure sensor groups and alarm DO ports. Refer to 3.3.2 and 3.3.3
- 5.2.3 Configure other alarm patterns such as Alarm to LiveCenter, Alarm Popup Image, Alarm Send Email, Alarm Popup Electron Map.

### 5.3 Manual Relay-Out Control

- 5.3.1 This function requires ILDVR Server to be installed with ILDVR-1608 or ILDVR-0808 alarm controller. Click the DO port button to checking mode on the “Relay out” panel will manually trigger the relay out port (DO port). This feature can widely be used to integrate with other devices.

5.3.2 Manual Relay-Out Control also can be controlled from ILDVR LiveCenter software when it is connecting with ILDVR Server.

## 6 Alarm Send Image to ILDVR LiveCenter

If you correctly configure system alarm as above 5.1 or 5.2, when an alarm is triggered ILDVR Server will automatically send the alarm camera or linkage camera image to ILDVR LiveCenter, additional steps:

### 6.1 Server's network configuration

Remote connection  Select "USE" in Remote connection field

Alarm connect to IP  Assign LiveCenter computer IP address

Connect port  Assign alarm using TCP port.

### 6.2 LiveCenter's network configuration

IP address  Input Server's IP address here

Alarm listen port  Assign alarm using TCP port

Auto-connect while alarm Select this box.

## 7 Alarm Popup Image

If you correctly configure system alarm as above 5.1 or 5.2, when an alarm is triggered the alarm camera or linkage camera will popup on screen as one split mode, additional steps:

Alarm popup interval  sec

Set a time of popup interval. No selection means no alarm popup.

## 8 Alarm Send Email

If you correctly configure system alarm as above 5.1 or 5.2, when an alarm is triggered ILDVR Server will automatically send email notification to assigned user, additional steps please refer to 3.5

## 9 Alarm Popup Electron Map

If you correctly configure system alarm as above 5.1 or 5.2, when an alarm is triggered the Electron Map will popup on screen, additional steps:

9.1 Use electron map  Select "USE" map in System Setup

9.2 In main interface click map button  will display the following picture (Electron Map). Click Setup button you can add/delete cameras and sensors.

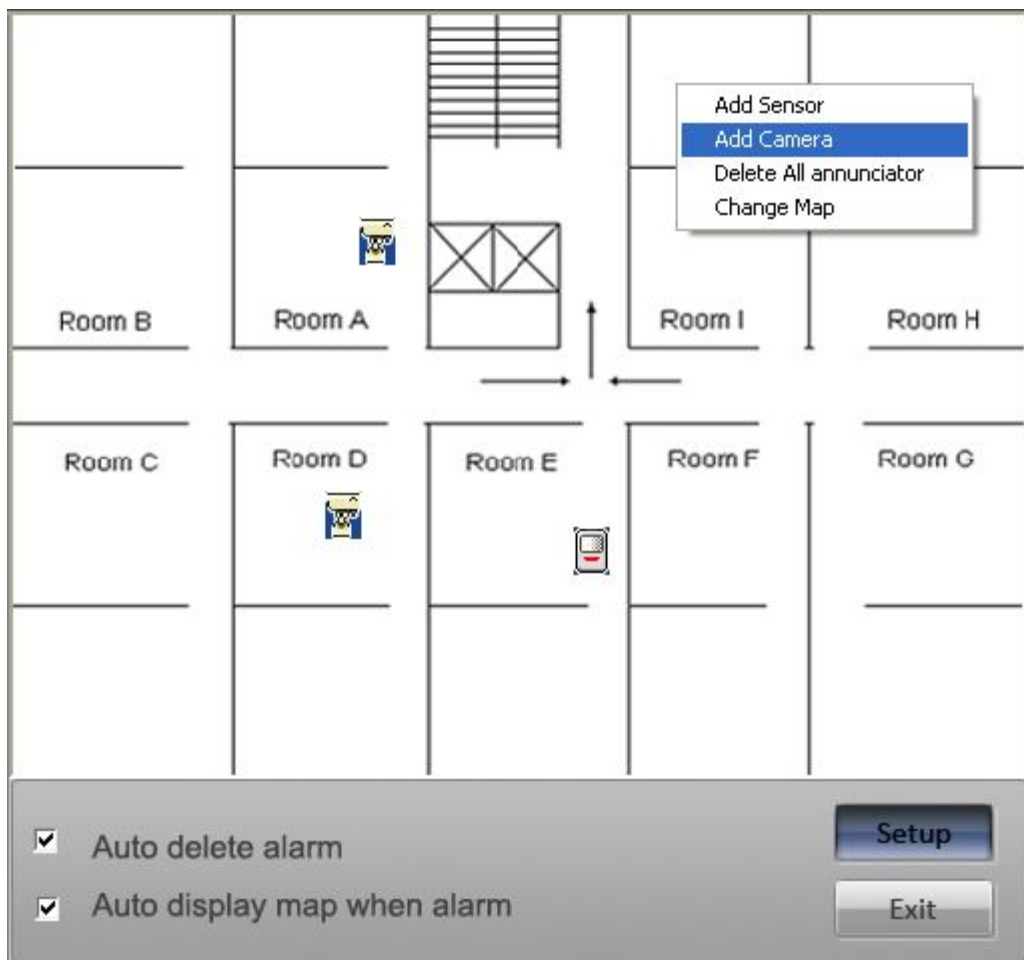

9.3 Add cameras/sensors: Press setup button, right click, select add a camera or a sensor.

9.4 Delete cameras/sensors: Press setup button, right click, select delete a camera or a sensor.

9.5 Auto-delete alarm: Select the check box for auto-ending an alarm message after the alarm times out.

9.6 Auto display Electron Map: Popup Electron Map at next alarm.

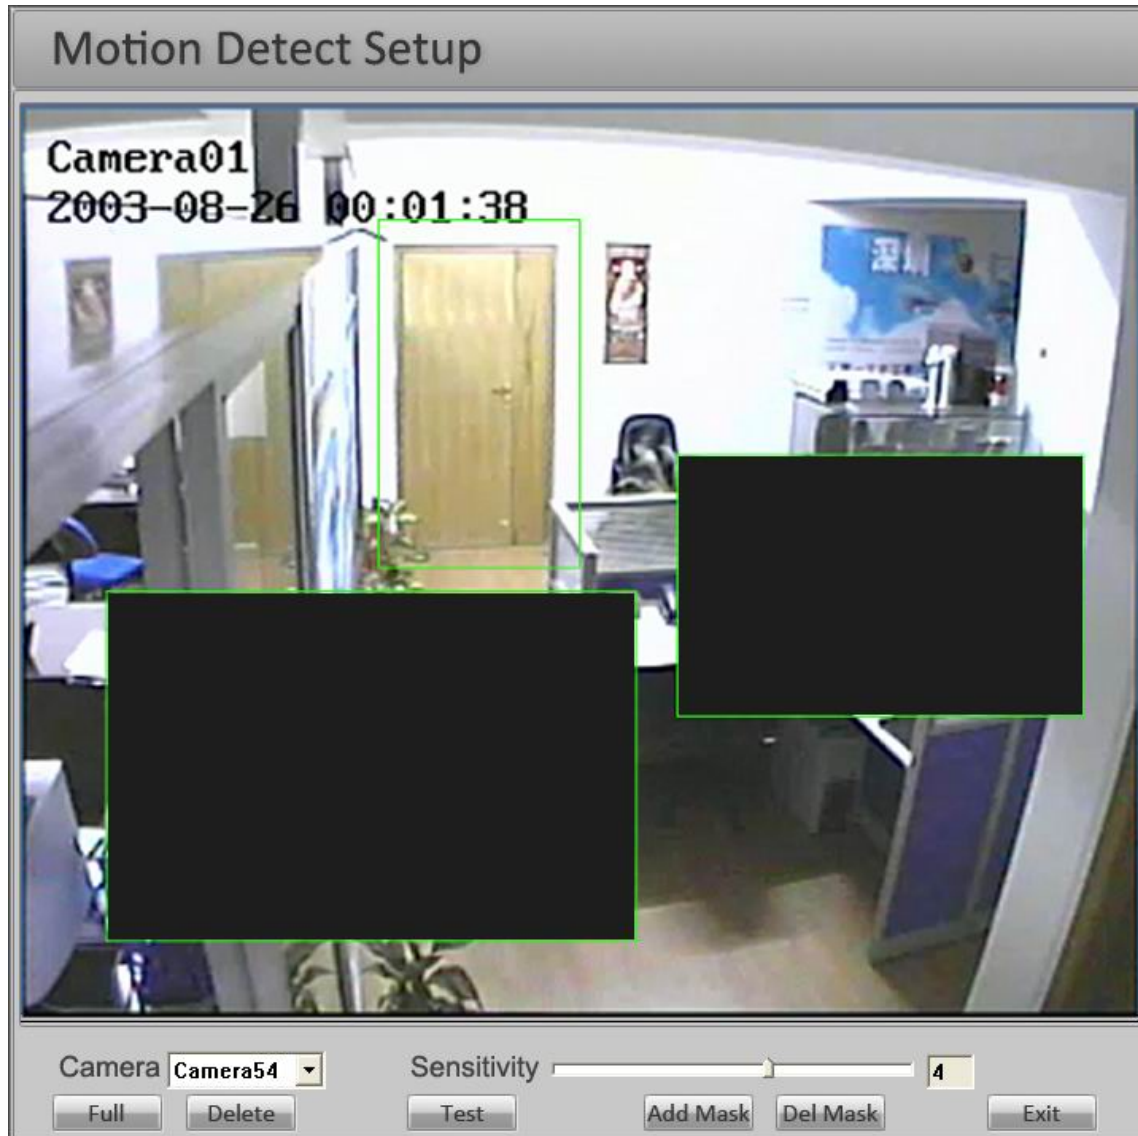

9.7 Change Map: Press setup button, right click and select Change Map then locate a pre-painted JPEG format image.

## 10 Mask Private Area

This setting is similar to Motion Detect setting. In main interface press button  will display the following interface. Click “Add Mask”, hold the left button of your mouse, drag & drop a rectangle area in the image, will turn black immediately. You can set up to 12 mask zones in one camera. Click “Del. Mask” to delete all mask

zones.

## 11 Fast PTZ Control On Screen

Referring to the following diagram user can easily perform PTZ control with speed dome camera on screen. In the camera image area **hold** the left button of your mouse, pull or push the mouse, this will move the speed dome in the following manner:

Zoom in -- Pull in center area.

Zoom out -- Push in center area

Move Left -- Push near left side

Move Right -- Push near right side

Move Up -- Push near up side

Move Down -- Pull near down side

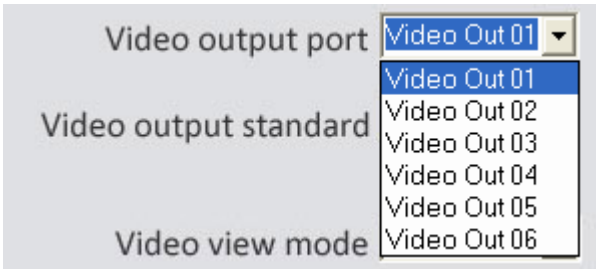

For fast run patrol, press any key from F3 to F8 in the keyboard. For more details please refer to Appendix A.

## 12 Digital Matrix (TV Out)

This function needs ILDVR-3000H4Dx decode card for support. Please refer to section 3.6 for more information. Before utilizing this feature, please check how many pieces of ILDVR-3000H4D card or how many channels of TV Output port you have. Then you can plan your TV-out switches. The following figure illustrates that system install 1 piece of 3000H4D4 (4ch D1) and 1 piece of 3000H4D2 (2ch D1). Configure Steps:

Step-1: Select Matrix saving group. 

Step-2: Select Video Output port 

Step-3: Correctly select video format to match your monitor. 

Step-4: Select Video view mode 

This is the key step in all steps. You should select the best image quality and the best switch time suitable for you. Every TV-Out port has 9 kinds of selectable split-mode but only one could be configured, 1-window, 2-widow, 4-window, 9-window, 13-window and 16-window. See the layout as following figures. At this point, for example, if you want to monitor 16 cameras in TV port-1, you have these choices:

You will spend 48 seconds ( $16/1 \text{ ch} \times 3 \text{ sec}$ ) to view all 16 cameras.

You will spend 24 seconds ( $16/2 \text{ ch} \times 3 \text{ sec}$ ) to view all 16 cameras.

You will spend 12 seconds ( $16/4 \text{ ch} \times 3 \text{ sec}$ ) to view all 16 cameras.

You will spend 6 seconds ( $16/8 \text{ ch} \times 3 \text{ sec}$ ) to view all 16 cameras. Leave window9 empty.

You can always view all 16 cameras. There is no switching.

Step-5: Select switching time.

Step-6: Select Viewing window to add camera.

If you add 2 or more cameras in this window, they will auto switch in time of “Video switch interval” (Step-5). All windows in drop-down box should be configured one by one from Step-6 to Step-8.

Step-7: Select camera channel type.

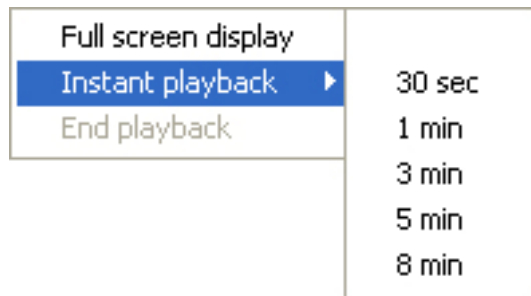

Step-8: Add camera to the window (selected in step-6)

Repeat Step-6 to step-8 until all windows finish in that window group.

**Important: Each camera can be assigned 2 times only. One is in “Main camera channel”. Another is in “Sub camera channel”. System will only remember the last 2 assignment.**

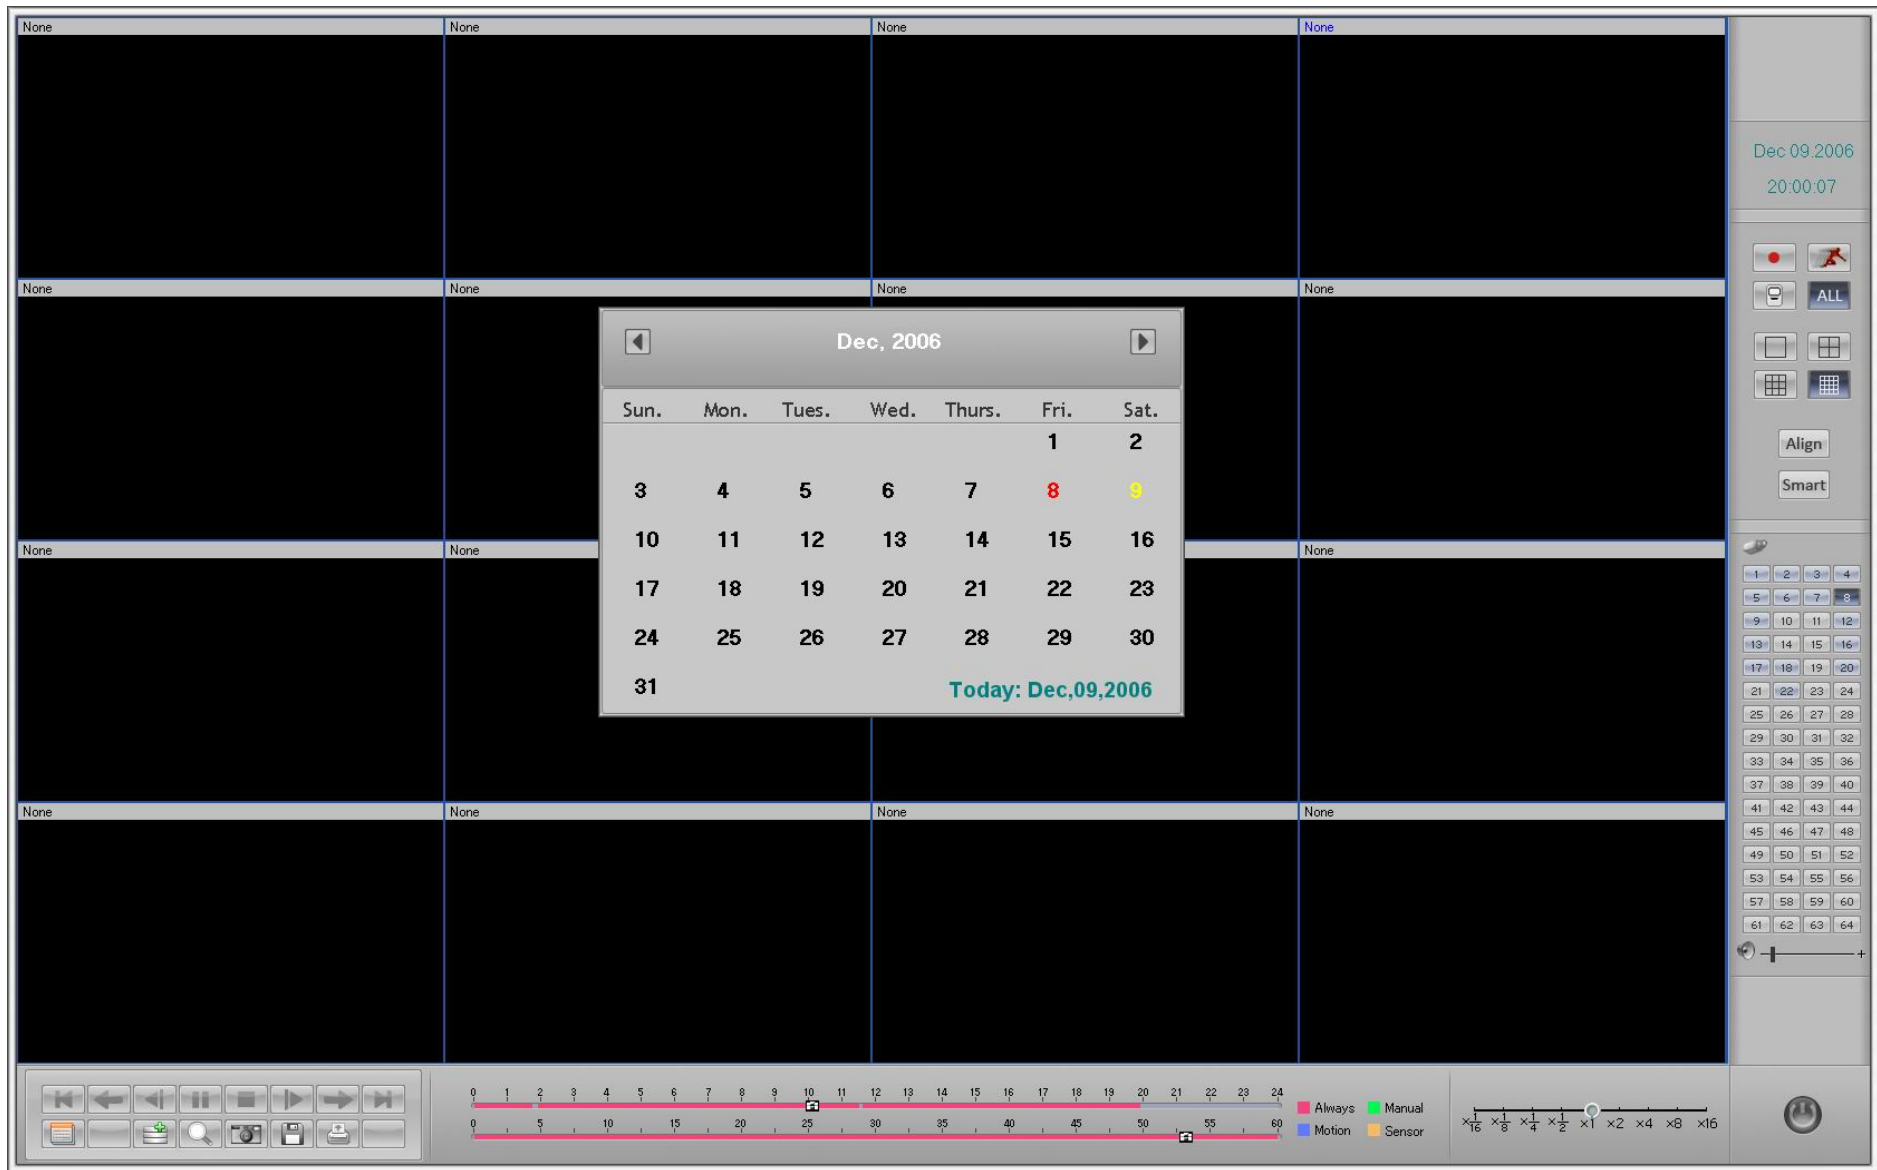

## 13 Instant Playback

Right click onscreen camera will display the following dialog interface. Select 1 of the 5 time options to playback. Right click again to select “END PLAYBACK”.

## 14 System Playback

**14.1 Enter Play back Mode:** In main interface click button  to enter playback interface.

The interface displays 36 camera feeds arranged in a 4x9 grid. Each feed includes a title bar with the camera ID, date, time, and recording mode. The feeds show various scenes: an outdoor view of a building (Camera 11), an indoor office area with a person at a desk (Cameras 13, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49, 51, 53, 55, 57, 59, 61, 63), a night outdoor view (Cameras 16, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64), and a close-up of a person's face (Camera 18).

The right-hand control panel features a date and time display (Dec 11 2006 00:01:49), a red stop icon, a red arrow icon, an 'ALL' button, a camera icon, a grid icon, an 'Align' button, and a 'Smart' button. Below these are 36 numbered buttons (1-36) for selecting individual camera feeds, a zoom slider, and a power button.

The bottom playback area includes a set of navigation buttons (stop, previous, play, next, full screen, etc.), a timeline with two tracks (0-60 seconds), a legend for recording modes (Always, Manual, Motion, Sensor), and a zoom control with a slider and buttons for zoom levels (x1/16, x1/8, x1/4, x1/2, x1, x2, x4, x8, x16).

**14.2 Select play back channel number:** Directly click the number button. ILDVR system will play back recorded data from beginning of the day.

A highlighted channel number means that channel has recorded data. Click channel number to select search camera.

Adjust voice volume

**Tips: Right click the picture to perform digital zoom function.**

**14.3 Select different type of record data.**

Click this button to search Manual Record data.

Click this button to search Motion Detect record data.

Click this button to search Sensor Record data.

Click this button to search all record data.

One channel playback mode.

Four channel playback mode. For example see below.

Nine channel playback mode.

Sixteen channel playback mode.

Align

Click this button to synchronize all channels.

**Note:** All cameras are playing back in the same date.

#### 14.4 Select different play back mode.

From left to right: Start, Last Min. Last Frame, Play/Pause, Stop, Next Frame, Next Min. End

Adjust playback speed

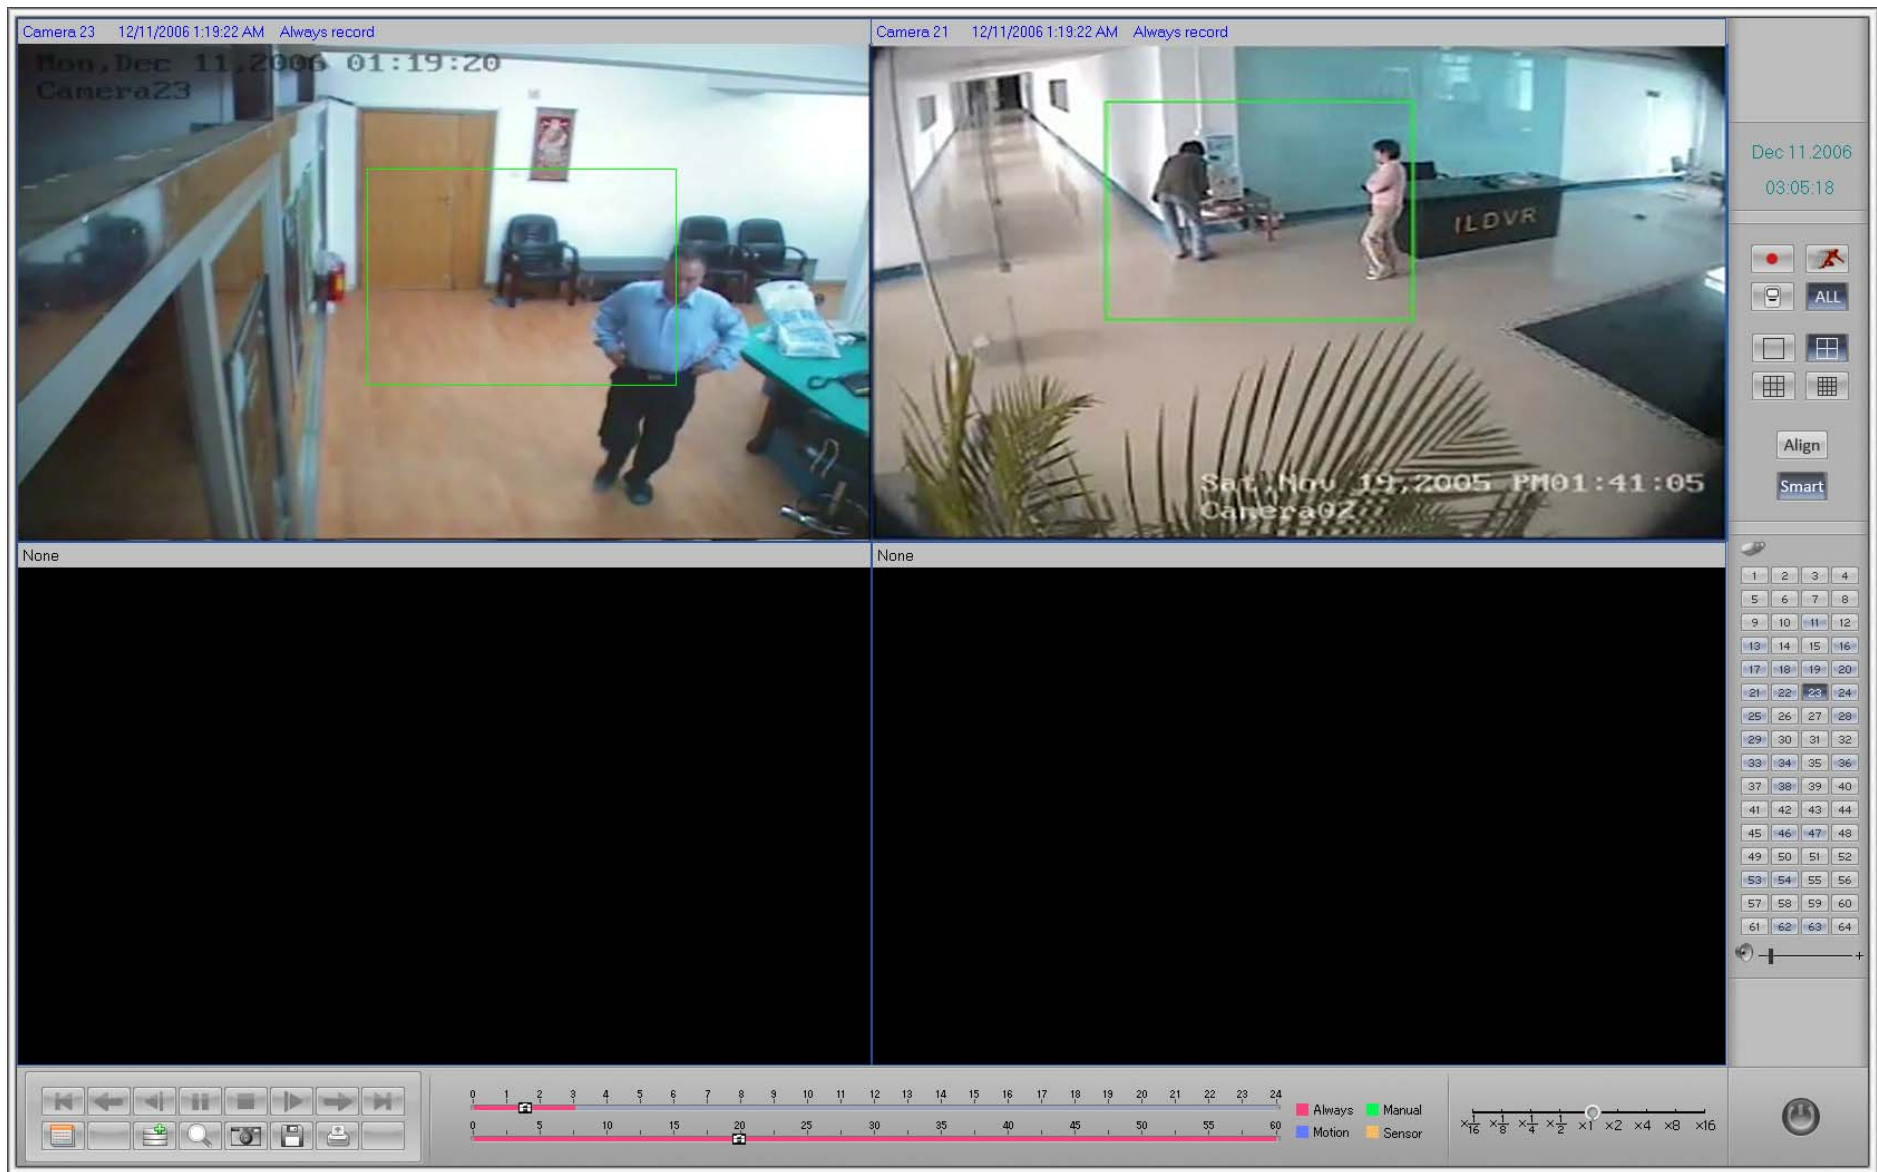

#### 14.5 Fast search by moving the time bar

Double click the colored time area or move the tag.

Different color means different recording mode.

## 14.6 Fast search via Smart Search

Smart Search button: Click to apply smart search function.

Smart Search is a useful method of fast search. It only searches certain areas that the user “draws” in the image and then only displays the moving images in that area. It saves time when looking for an event. Draw a green rectangle on the image, then any movement in that area will display the playback.

## 14.7 Change searching date

Click  to bring up the calendar, a red number means that there is Recorded Data on that day, yellow number means today.

Click  or  to change month

Dec, 2006						
Sun.	Mon.	Tues.	Wed.	Thurs.	Fri.	Sat.
					1	2
3	4	5	6	7	8	9
10	11	12	13	14	15	16
17	18	19	20	21	22	23
24	25	26	27	28	29	30
31	Today: Dec,09,2006					

## 15 Capture Pictures

### 15.1 Capture image in monitor mode:

Monitor mode click button  will auto-save one picture of current camera to C:\Capture\CHxx folder (xx is camera number). If you want to change this default path, edit the SystemPara.ini in the program install folder, put your new folder path in the sentence of “SavePath=”

Original sentence is:

```
[GraphSavePath]
```

```
SavePath=C:\Capture
```

### 15.2 Capture image in playback mode:

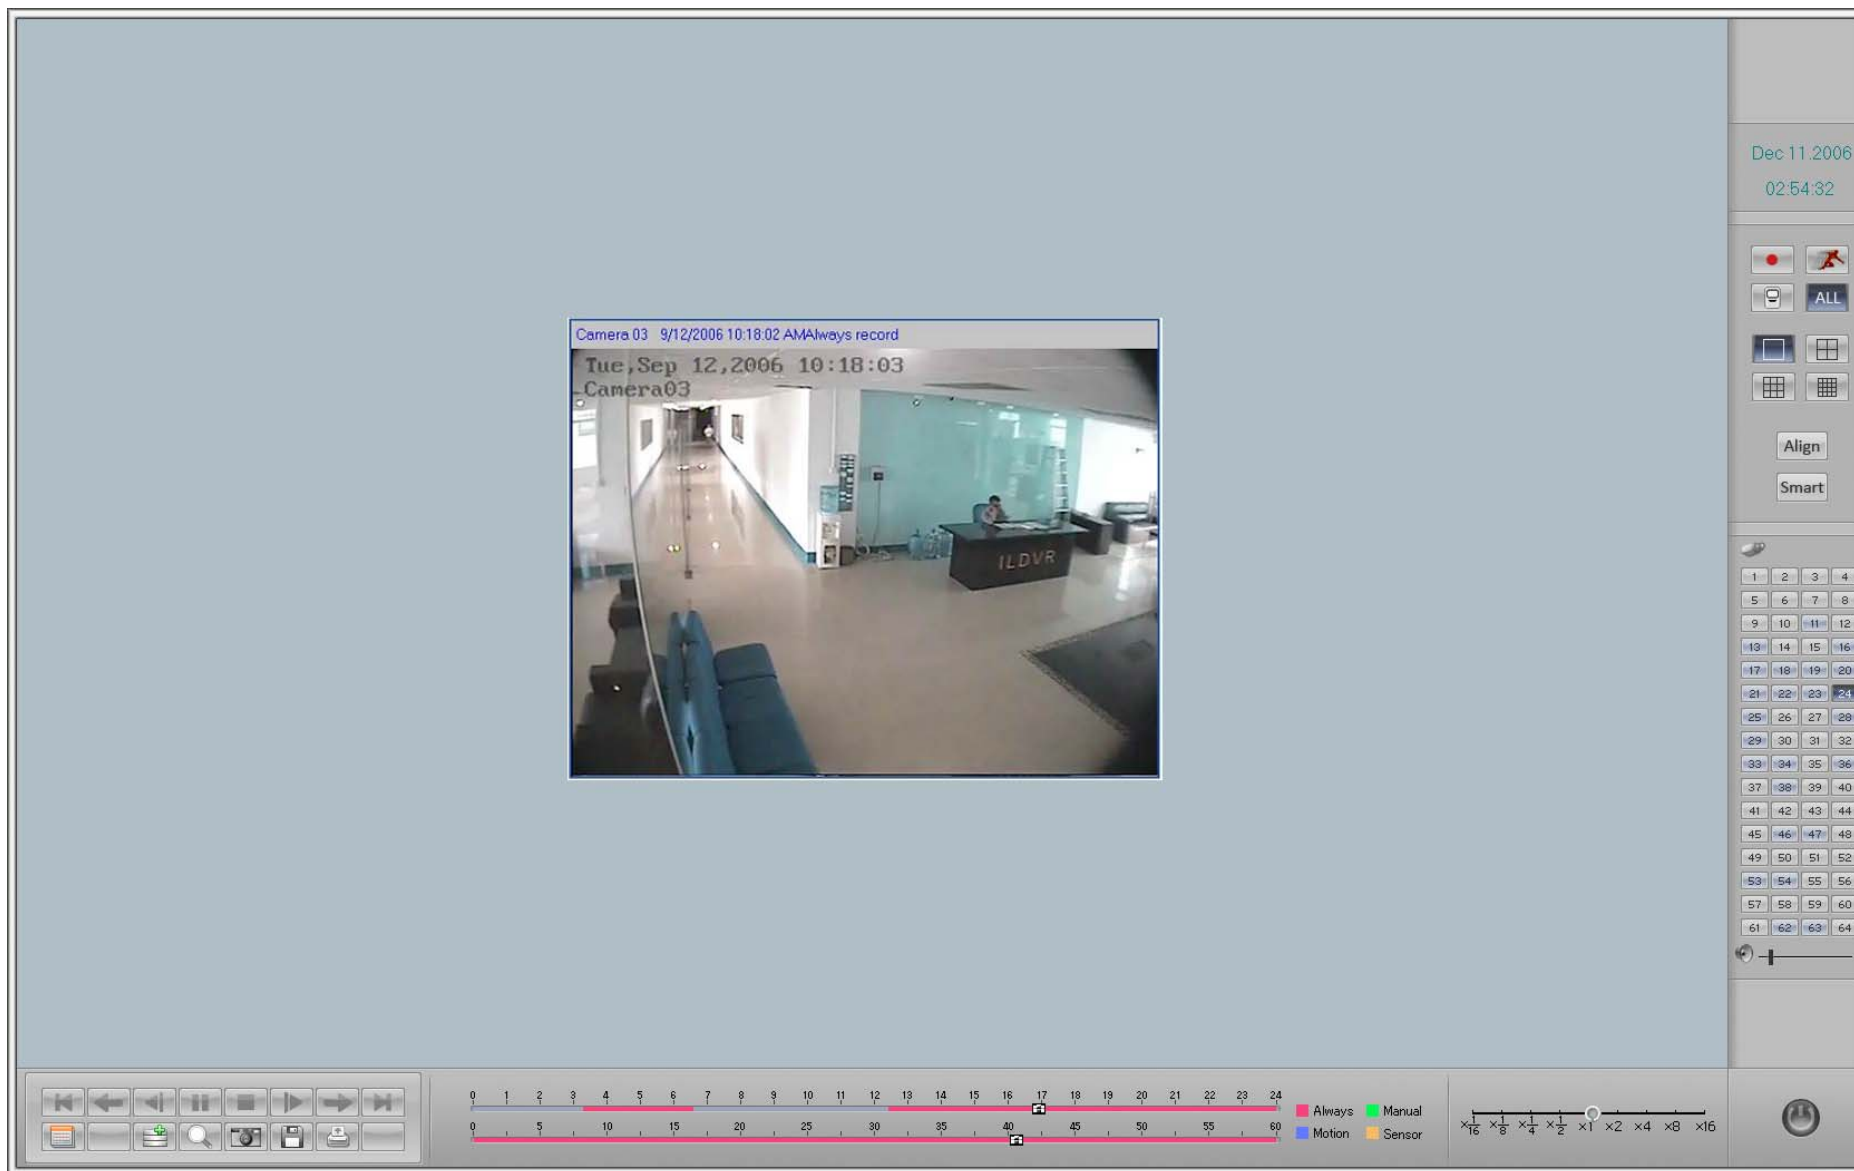

In playback mode click button  will take a snapshot on screen, you should click button  to save it to a destination folder. You can also press button  to print the captured image.

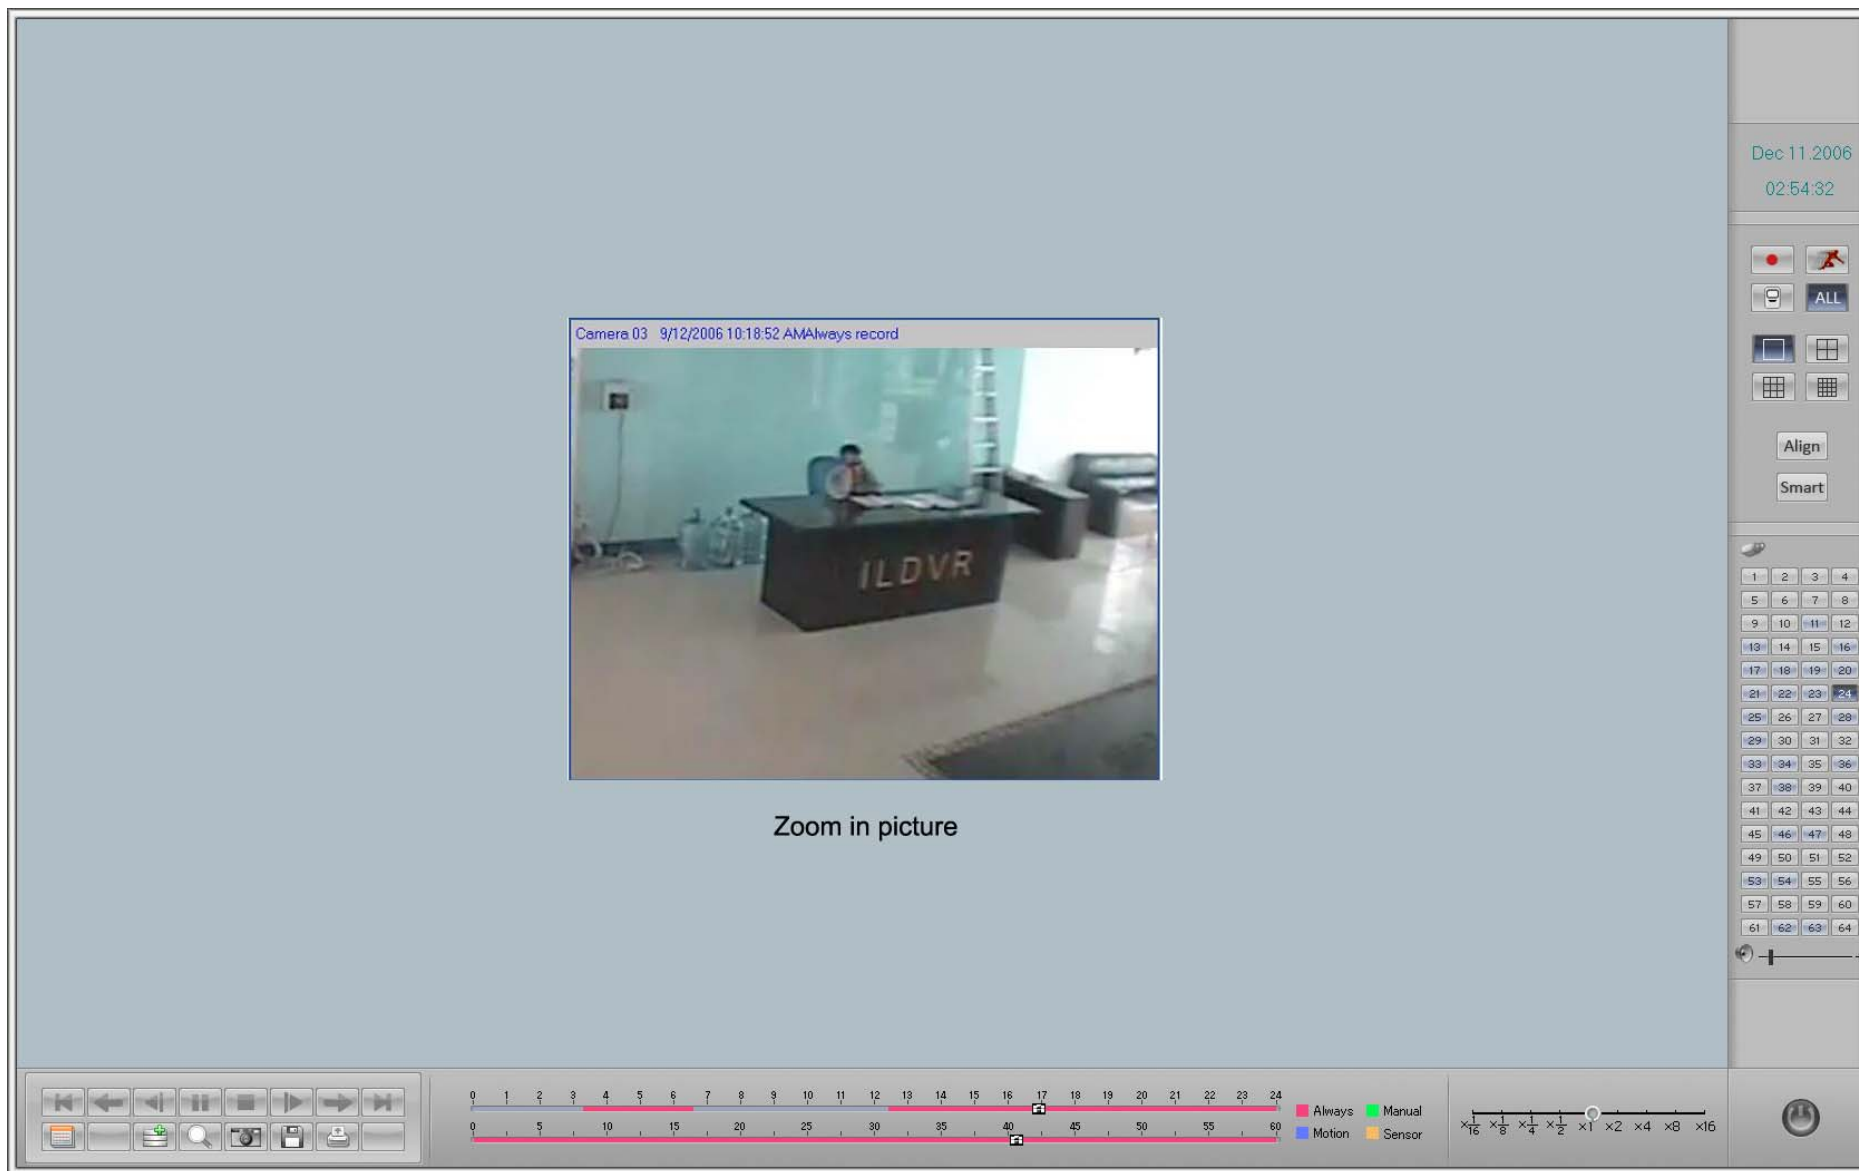

## 16 Zoom in image while playing back

Click button  to perform Image Zoom In function. Move the mouse cursor to any area then click it. The part will display as “zoom in” resolution. Right click will restore normal resolution. Compare below pictures.

Zoom in picture

## 17 Print Picture

Click print button  to print the captured picture.

## 18 Video Clip and Burning Data DVD/CD

**18.1 Auto Backup** Refer to 3.4.1.

### 18.2 Video Clip

After selecting searching date and/or searching channel, click button  to bring up the “File Clip and Backup” interface. In the “Record File Lists” window, select aim file to play back, click button  to begin video clip, click button  to end video clip. Click button  to save clip file. Click button  to play the clip video.

**Noted: The clip file default folder is D:\Clipfile\CameraXX (XX means camera number). If clip file save in other folder, it cannot show in the “Record File Lists” window by clicking button.**

### 18.3 Backup to DVD/CD R/W

The first time you click the CD R/W button  to run DVD R/W or CD R/W program, it will bring up the following “Open program” interface. Please refer to the following picture to locate the DVD R/W or CD R/W program in your system if available, for example. NERO.EXE. The system will memorize this path and auto-run Nero.exe when you click CD R/W button next time.

**Tips: In some systems the first time you click DVD/CD R/W button, the “Open program” interface doesn’t show on the screen, meanwhile user cannot control any button or interface. This is because the “Open program” interface is hidden behind the ILDVR main interface. Please press “Alt + Tab” to shift interface.**

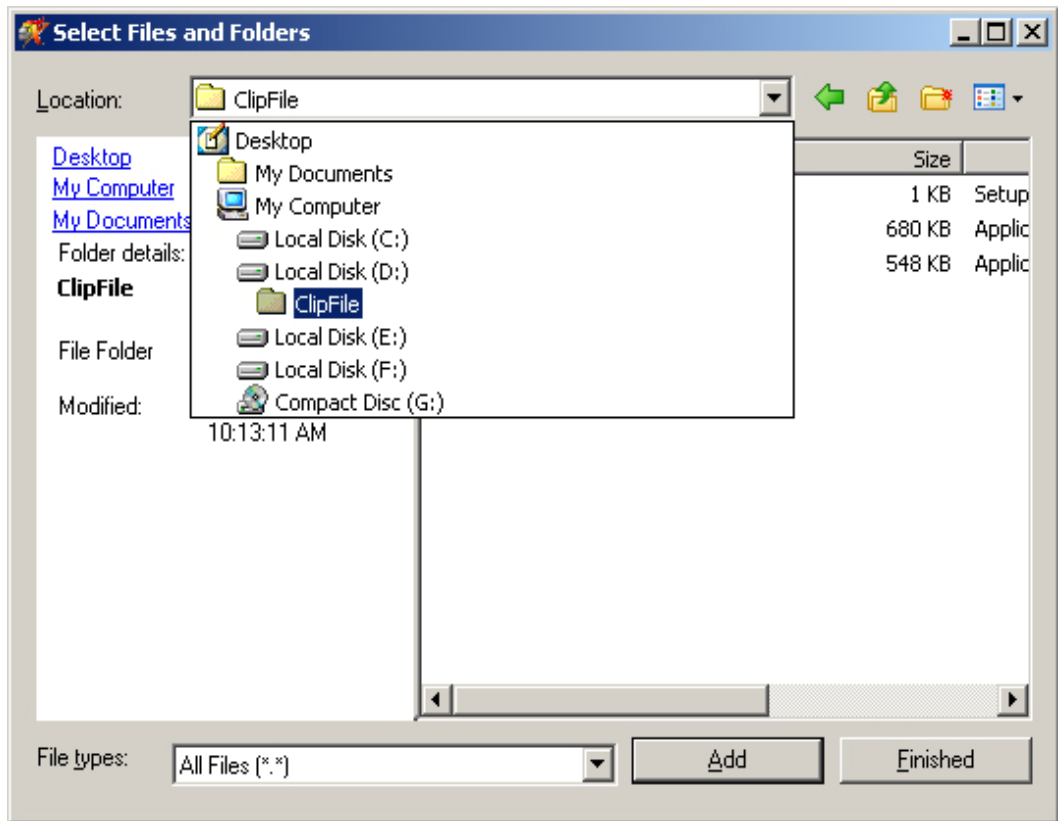

After the Nero program is running, please go through the following steps:

- a. Select "Data" → "Data Disc"

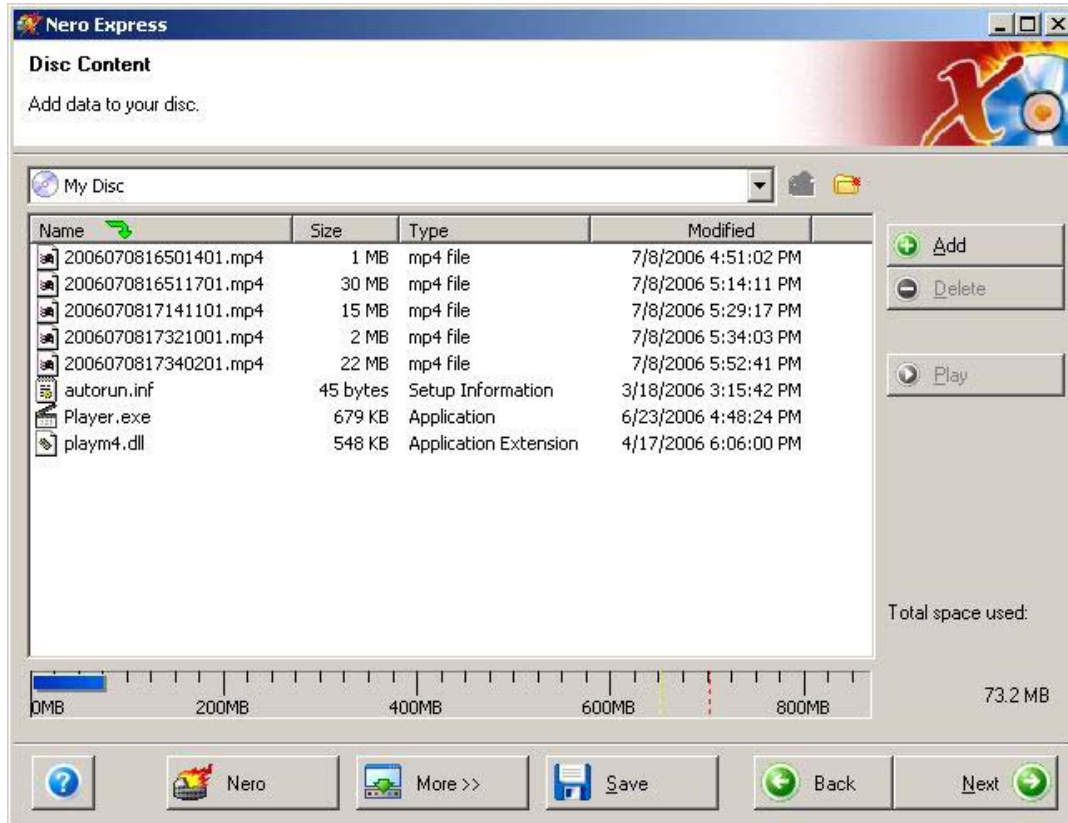

b. Click “Add” button then locate the path “D:\ClipFile”, select the 3 files “Autorun.inf”, “Player.exe” and “playm4.dll”, click button “Add” and then click the button “Finish”.

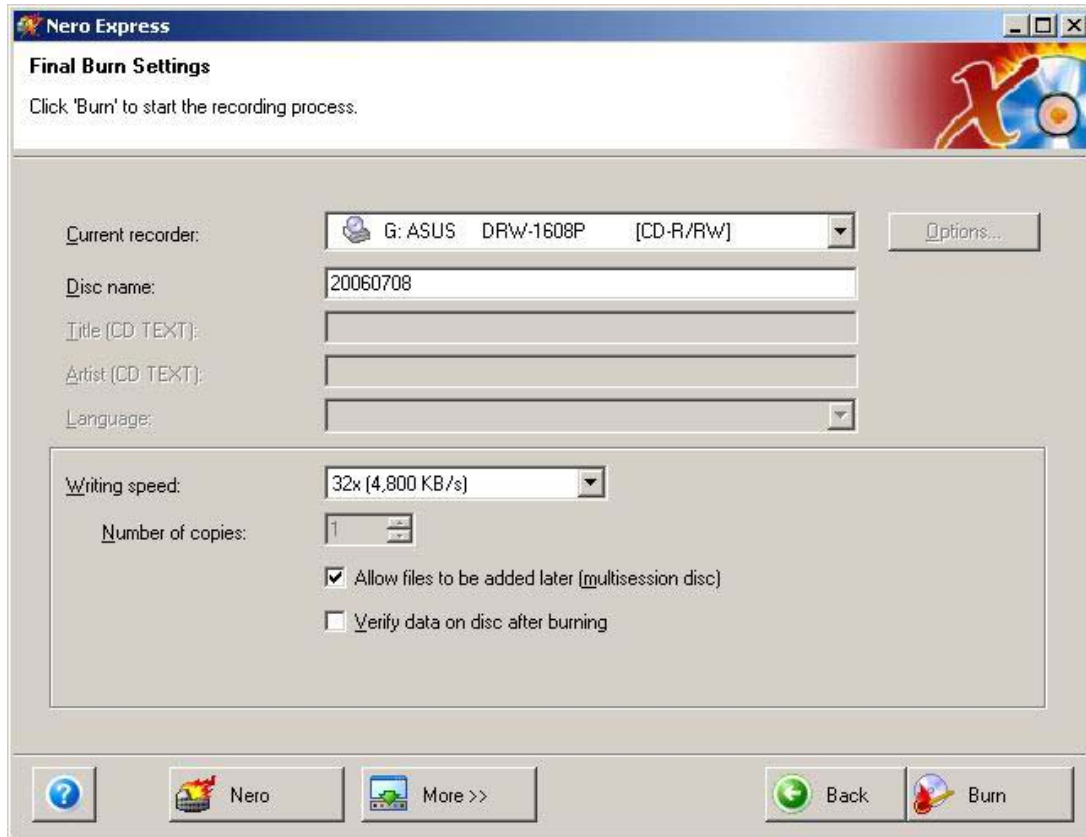

c. Again Click “Add” button then locate the data path “D:\\_RECORD\_\20060708\Camera01\...” (For example) to select the backup files, click button “Add”, select the files you wish to backup and then click the button “Finish”.

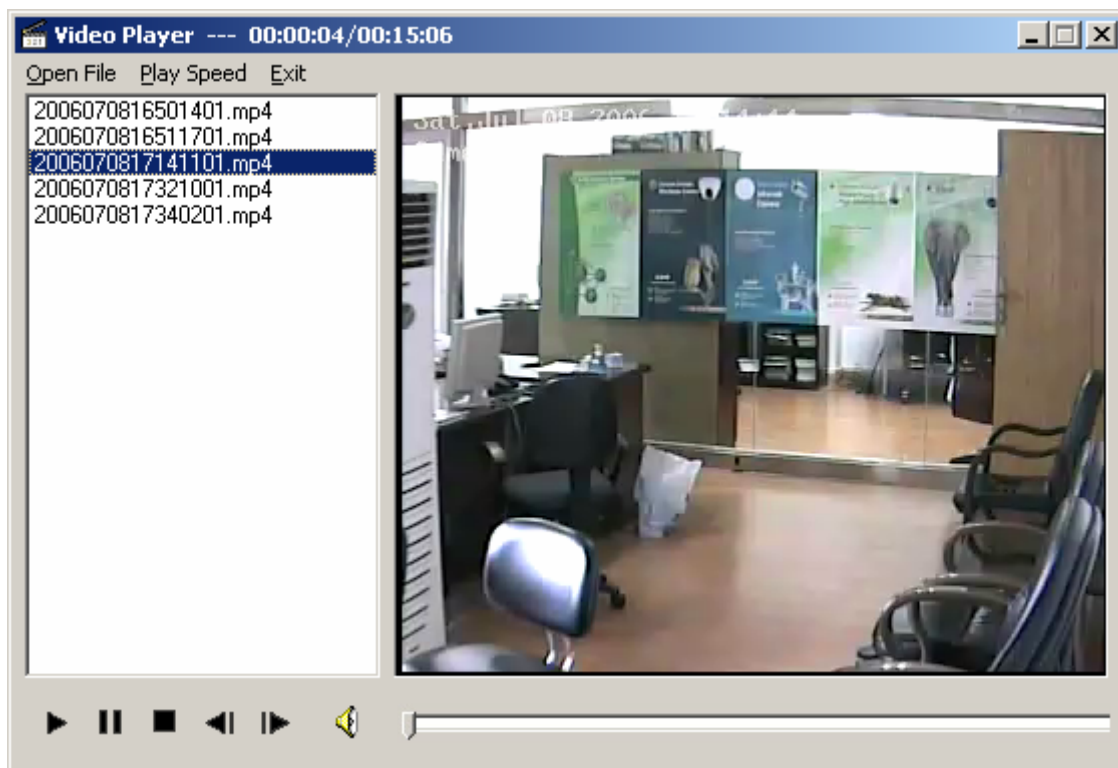

d. Edit a backup disc name in the “Disc name” input box, click button “Burn” to begin burning backup disc.

## 19 Viewing Back Up Data

Insert the backup disc to CD ROM, “Player.exe” will auto-run, click “open file” in the File menu then locate the directory path of backup data. All video files will be listed at the left panel and auto-play sequentially.

## 20 Audio Monitor

### 13.1 Configure Audio Record

Record mode  Select video+audio.

### 13.2 Configure Audio Monitor

Audio monitor  Select Use.

## 21 Remote Talk

In main interface click remote talk button  to enter remote talking mode.

Input the remote IP address, then click “ok”.

**Note: Remote talk function needs sound card and MIC/speaker installation.**

## 22 System Logs

### 22.1 Writing On Duty / Off Duty Log

In main interface click button  will display the ON DUTY LOG interface. This is for work log input. Click Finish button to save work log. The message will automatically save into system log.

### 22.2 Looking system log

In main interface click button  will display the following “System Log List” interface. You can search archived system log or save system log to other file. Click “Search Work Log” to look above ON DUTY LOG.

## ON DUTY LOG

## Chapter 2

# ILDVR LiveCenter

### 1 Start Up

After correctly install ILDVR LiveCenter software, a shortcut icon

will show up on windows desktop. Double click it to run ILDVR LiveCenter, the main

interface is as the following picture:

## 2 Main Interface

### 2.1 Change monitor mode:

Split mode shift button

### 2.2 Hot control buttons:

- 2.2.1  Lock button: Click button to lock or unlock system.
- 2.2.2  Playback button: Click to enter log file searching mode locally.
- 2.2.3  Setting button: Click to enter system connection setting interface.
- 2.2.4  Remote Talk button: Click to begin remote talk.
- 2.2.5  Picture capture button
- 2.2.6  Manual record button
- 2.2.7  Remote playback button: Click to enter log file searching mode remotely.
- 2.2.8  Remote management button
- 2.2.9  View local log button

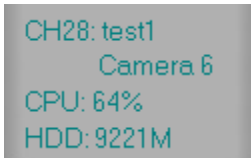

2.2.10  View remote log button

2.2.11  Speed dome control panel on/off

2.2.12 

2.2.13  IP Matrix Auto-rotate button, it needs hardware support.

### 2.3 Status Window:

```
CH28: test1
      Camera 6
CPU: 64%
HDD: 9221M
```

The message in above Status Window means the current active channel is window 28. The remote server name is “test1”. Current connecting camera on “test1” is camera 6. System CPU usage is 64%. Total free hard disk space is 9221MB.

### 2.4 Sensor Panel:

Gray color number button means that sensor or DO port is not working, light purple color number button means that sensor or DO port is working in checking mode, dark purple color number button means that sensor or DO port is working in alarming mode.

### 2.5 Speed Dome Panel:

See **Appendix D**. This speed dome panel only appears when the current camera is configured to use High

Speed Dome camera.

## 2.6 Adjust color and voice:

Brightness

Contrast

Tone

Saturation

Voice

Adjust settings by drag & drop the red scroll bar, click the right icon to restore default value.

## 2.7 PTZ control:

Click this PTZ button to open the PTZ Control panel.

Click this PTZ button to close the PTZ Control panel.

Light on/off button

Blower/windshield wiper on/off button.

Click to change PTZ directions. Circle button  is for auto scan.

### 2.8 Exit system:

By clicking this "Exit" button this will display next dialog interface.

**Note: Some control buttons need authorization to work.**

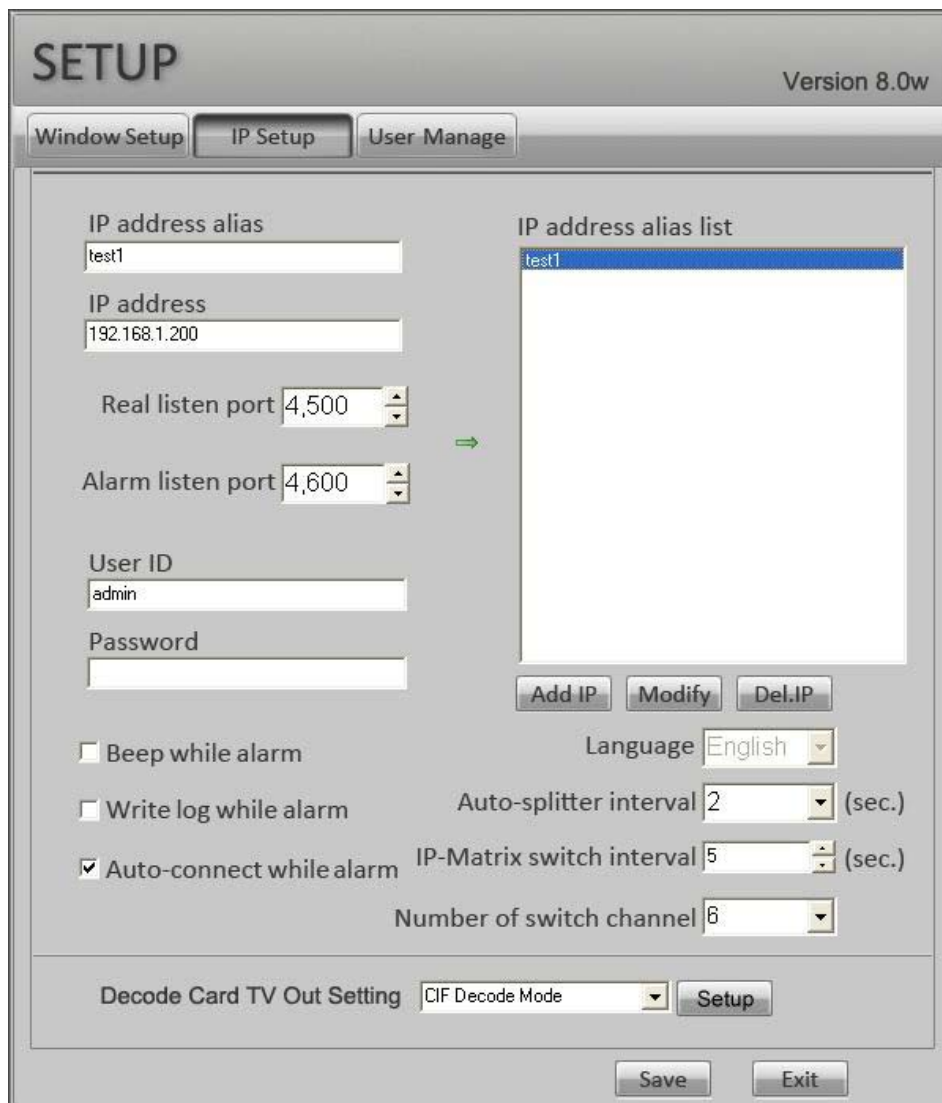

## 3 Network Connection Setup

ILDVR System applies the latest IP network technology. It supports multi-point to multi-point network connection. This means that one server can support Max. 256 channels connection from different computers simultaneously. On the other hand one LiveCenter system can support Max. 64 channels connection to different servers simultaneously. In each row of window number, click every column to select corresponding settings.

In main interface click button  to enter setup interface.

### 3.1 Add Server IP and site name:

In SETUP interface click button  to bring up the following interface.

The screenshot shows the 'IP Setup' window within the 'SETUP' interface. The window title is 'SETUP' and the version is 'Version 8.0w'. There are three tabs: 'Window Setup', 'IP Setup' (selected), and 'User Manage'. The interface is divided into two main sections. The left section contains input fields for 'IP address alias' (test1), 'IP address' (192.168.1.200), 'Real listen port' (4,500), 'Alarm listen port' (4,600), 'User ID' (admin), and 'Password'. Below these are three checkboxes: 'Beep while alarm' (unchecked), 'Write log while alarm' (unchecked), and 'Auto-connect while alarm' (checked). The right section is titled 'IP address alias list' and contains a list box with 'test1' selected. Below the list box are 'Add IP', 'Modify', and 'Del.IP' buttons. At the bottom of the right section are 'Language' (English), 'Auto-splitter interval' (2 sec.), 'IP-Matrix switch interval' (5 sec.), and 'Number of switch channel' (8). At the bottom of the window are 'Decode Card TV Out Setting' (CIF Decode Mode) and 'Setup', 'Save', and 'Exit' buttons.

**IP Address Alias:** Description of remote server

**IP Address:** Remote server IP address or domain name.

**Real listen Port:** Realtime monitor and remote search connecting port

**Alarm listen Port:** Receive alarm message connecting port

**User ID and Password:** Authorized User Name and Password log into the server.

**Beep while Alarm:** Click to select playing a sound when there is an alarm from remote server.

**Write Log while Alarm:** Click to select writing log when there is an alarm from remote server.

**Auto Connect while Alarm:** Click to select displaying image of the alarm channel when there is an alarm from remote server.

**Language:** Change language setting

**Auto-Splitter interval:** Select auto-split changing speed time in seconds. The viewing mode split is different from IP-Matrix switch.

**IP-matrix switch interval:** IP-Matrix auto-switch time in seconds. This feature doesn't need ILDVR-3000H4D decode card to support.

**Number of switch channel:** This option is to set how many connections will connect and then disconnect again automatically and repeatedly. This feature doesn't need ILDVR-3000H4D decode card to support. See 12, IP Matrix & TV Out.

**Decode Card TV Out Setting:** See more at IP Matrix & TV Out.

**Note:** The above alarm settings depend on the server alarm setting. Refer to Chapter 1, System Alarming Setting

### 3.2 Set channel connection parameter:

Click button  to bring up the following interface.

**SETUP** Version 8.0w

Window Setup | IP Setup | User Manage | Prestore01

Window	IP Address Alias	Camera	Frame Rate	Save Mode	Use IP-Matrix
Window1	test1	Camera13	Auto	Save	Use
Window2	test1	Camera14	Auto	Save	Use
Window3	test1	Camera16	Auto	Save	Use
Window4	test1	Camera16	Auto	Save	Use
Window5	test1	Camera17	Auto	Save	Use
Window6	test1	Camera18	Auto	Save	Use
Window7	test1	Camera19	Auto	Save	Use
Window8	test1	Camera20	Auto	Save	Use
Window9	test1	Camera21	Auto	Save	Use
Window10	test1	Camera22	Auto	Save	No Use
Window11	test1	Camera23	Auto	Save	No Use
Window12	test1	Camera24	Auto	Save	No Use
Window13	test1	Camera25	Auto	Save	No Use
Window14	test1	Camera29	Auto	Save	No Use
Window15	test1	Camera28	Auto	Save	No Use
Window16	test1	Camera33	Auto	Save	No Use
Window17	test1	Camera34	Auto	Save	No Use
Window18	test1	Camera36	Auto	Save	No Use
Window19	test1	Camera46	Auto	Save	No Use
Window20	test1	Camera47	Auto	Save	No Use
Window21	test1	Camera54	Auto	Save	No Use
Window22	test1	Camera53	Auto	Save	No Use
Window23	test1	Camera62	Auto	Save	No Use
Window24	test1	Camera63	Auto	Save	No Use
Window25	test1	Camera13	Auto	Save	No Use
Window26	test1	Camera14	Auto	Save	No Use
Window27	test1	Camera16	Auto	Save	No Use
Window28	test1	Camera17	Auto	Save	No Use

Save | Exit

The system can save 16 groups of pre-stored connections, IP-Matrix will auto switch connections (connect and disconnect) between these 16 groups. Select group number then set each channel parameters.

**IP Address Alias:** Remote server name.

**Camera:** Server's camera number

**Frame Rate:** Display speed-- select 1fps for low speed connection or multiple channels connection, for example more than 8 channels.

**Save Mode:** Save video to local disk or no save after getting connection.

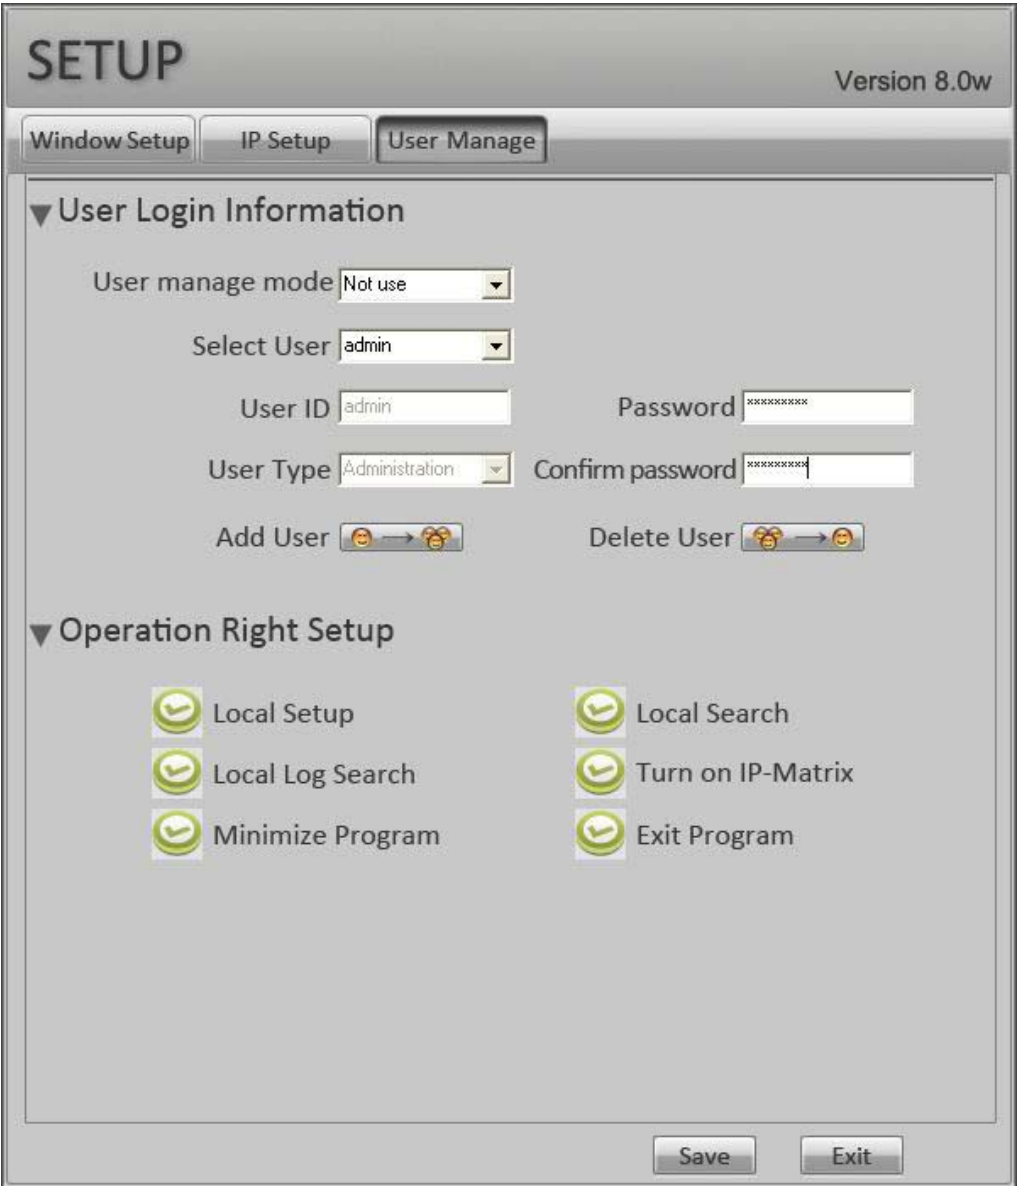

**Use IP-Matrix:** Select the channel use or not use IP-matrix function. This feature doesn't need ILDVR-3000H4D decode card to support. See 12, IP Matrix & TV Out.

**Important:**

- 1). Do not setup too many windows at real-time connection, otherwise the system will run at low speed.
- 2). If network bandwidth exceeds connecting settings, the exceeding resource will be auto-allocated to the active channel. So if you click one channel, it displays faster.

### 3.3 User management:

Refer to Server 3.5

### 3.4 Get connection

There are 2 methods to get connection:

- Click the channel number directly. Click again to disconnect.

- Click group button, select pre-stored group number then click button **Con.All**. Click button **Dis.All** to disconnect all connection.

## 4 Remote Management

Click this button  to enter remote server setup interface.

A login dialog box with a light gray background. It contains two text input fields. The first field is labeled 'Username' and the second field is labeled 'Password'. Both fields are empty.

If the server is in User Manage Mode, a login dialogue box will

display. Input correct User ID and Password, then click OK, the following setup interface appears

# System Configuration

Version 8.0w

Dec 10, 2006  
18:35:17

## ▼ System

Camera channel	84	Sensor input	16	Sensor output	0
PTZ use port	COM1	Audio monitor	Not Use	Use electron map	Use
Alarm use port	COM2	Save log day	30	Splitter auto change	3 sec
DI/DO device	ILDVR-1608	Beep while alarm	Not Use	Language	English
Record save disk	D:\	Save record mode	Record Auto Repeat	Key stroke	Not Use
Modify HDD remain space(MB)	C:\	1000	Alarm popup interval		sec

## ▼ Network

Remote connection	Use	Listen port	4,500	Web listen port	80
Alarm connect to IP		Connect port	4,600		

## ▼ Boot Mode

<input checked="" type="radio"/> Exit to Windows	<input type="radio"/> Exit and shutdown	<input type="radio"/> Auto shutdown	0 H 0 M
Auto reboot date(Mon.~Sun.)	1 2 3 4 5 6 7	Reboot at	0 H 0 M
<input type="checkbox"/> Auto hide	Time format	24 hour format	

All items are the same as server setup interface, refer to 3.1 – ILDVR System setting.

**Note: For security purposes some settings are limited at the server. Remote users will not have access to all settings. Changing system setting needs User Rights support.**

## 5 Remote Control PTZ & Relay Out

If your LiveCenter connects multiple DVR Server, please check the status window to confirm that if you have selected correct DVR Server and correct camera. To activate a camera channel that you want to control, simply move the mouse and click on it.

The current DVR Server and camera channel are inside red circle.

**Noted: Remote control needs User Right support.**

### 5.1 Change color and voice volume

Brightness

Adjust settings by drag & drop the red scroll

Contrast

bar, click the right icon to restore default value.

Tone

Saturation

Voice

### 5.2 Perform remote PTZ control

Click this PTZ button to open the PTZ Control panel.

Click this PTZ button to close the PTZ Control panel.

Light on/off button

Blower/windshield wiper on/off button.

Zoom in/Zoom out  
Focus in/Focus out  
Iris change

Click to change PTZ directions. Circle button  is for auto scan.

### 5.3 Perform remote Relay Out control

In main interface click the DO port button that is in checking mode on the “Relay out” panel will remotely trigger the relay out port (DO port).

The feature needs ILDVR Serer install ILDVR-1608 or ILDVR-0808 alarm controller.

## 6 Remote Talk

In main interface select an active channel which you want to talk with, then click remote talk button  to enter remote talking mode. Click “End Talk” button to end remote talk.

**Note:** Remote talk function needs sound card and MIC/speaker installation.

## 7 Remote Record

**Auto-record after connecting:** Set Save mode in Setup interface.

Window	IP Address Alias	Camera	Frame Rate	Save Mode	Use IP-Matrix
Window1	test1	Camera13	Auto	Save	Use
Window2	test1	Camera14	Auto	Save	Use
Window3	test1	Camera16	Auto	Save	Use
Window4	test1	Camera16	Auto	Not Save	Use
Window5	test1	Camera17	Auto	Save	Use
Window6	test1	Camera18	Auto	Save	Use

**Manual record after connecting:** In main interface click button  to start recording of active window. If you want to record multiple channels at same time you have to keep repeating this operation. First select channel number, then click manual record button . Click it again to stop record. All record data are saved in the LiveCenter computer.

## 8 Instant Remote Playback

Right click onscreen camera will display the following dialog interface. Select 1 of the 3 options time to playback. Right click again to select “End Playback”.

Full screen display	
Instant playback ▶	10 sec
End playback	30 sec
	60 sec

## 9 Remote Search

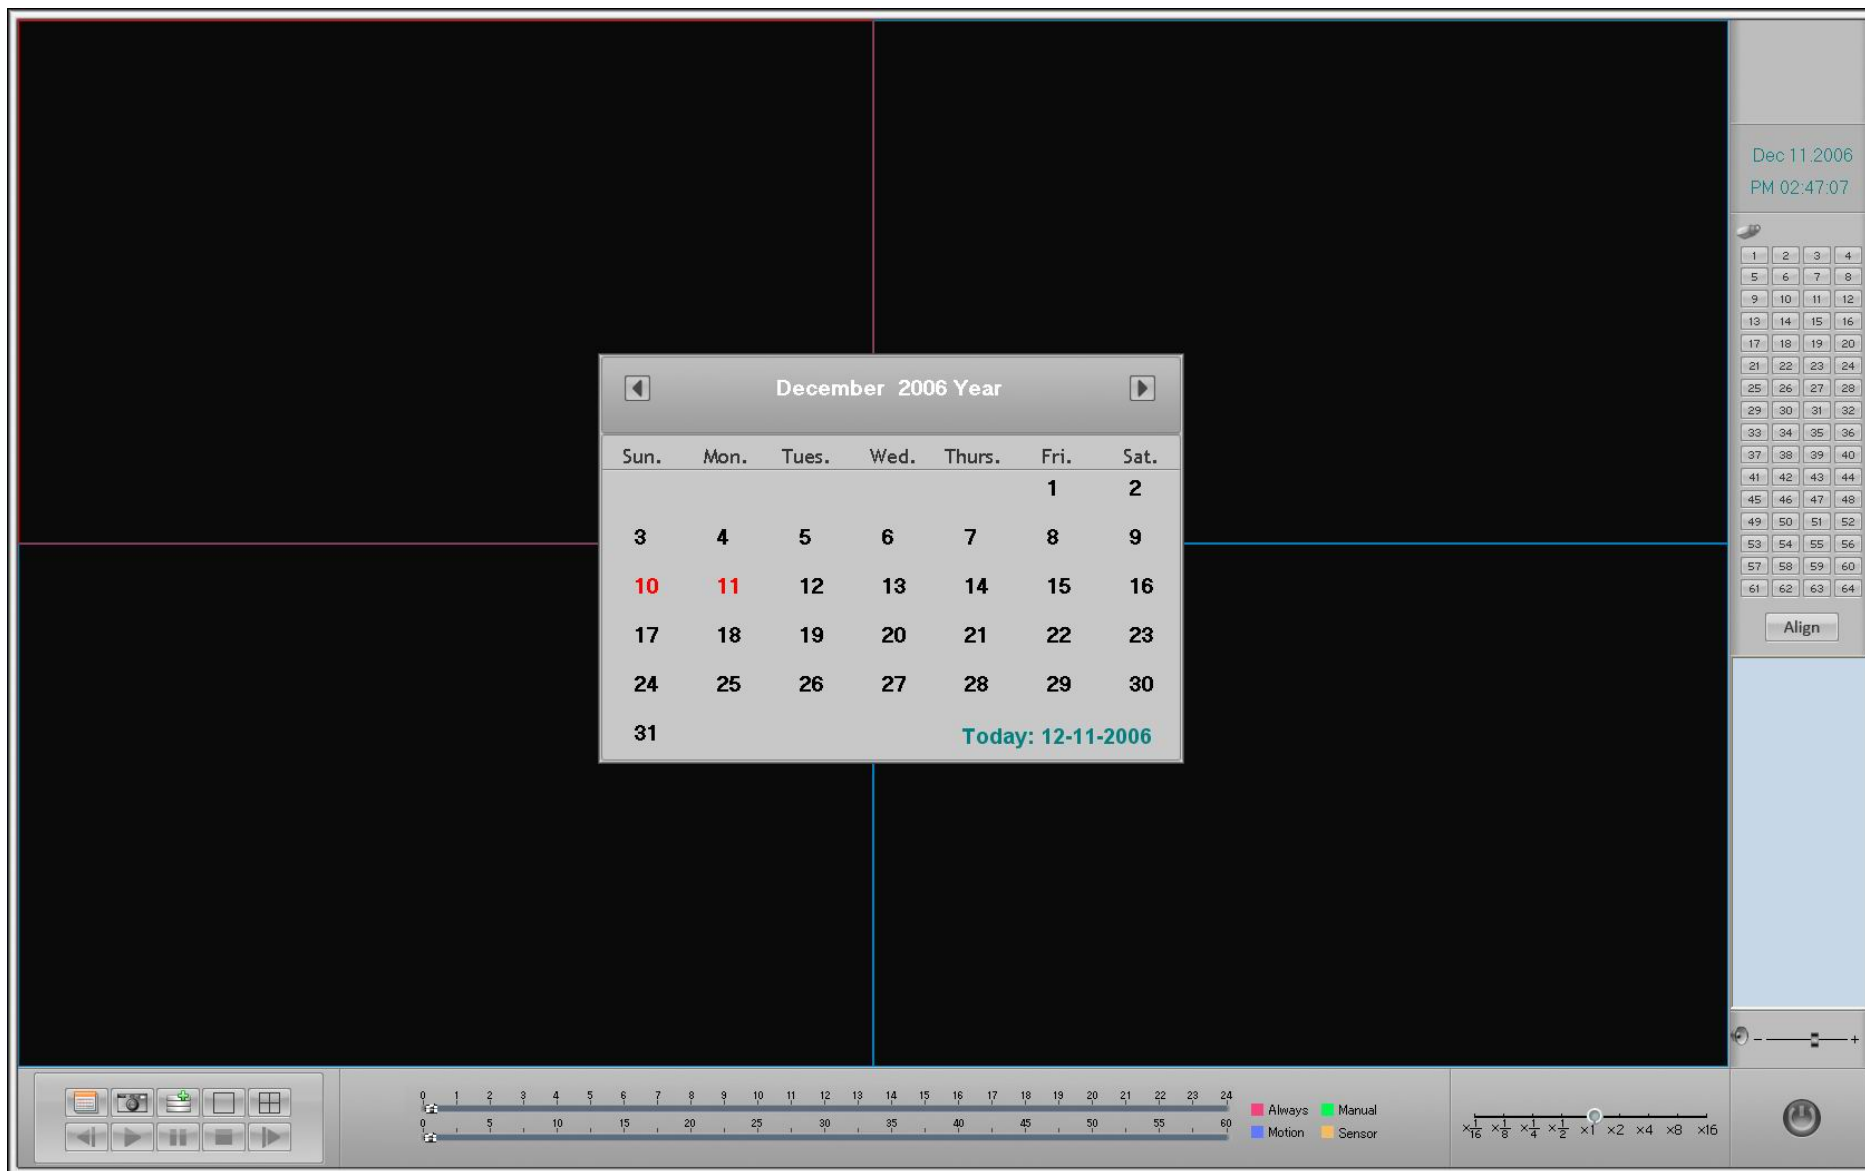

9.1 **Select remote server:** In main interface click button  to bring up the following dialog box. Select remote server alias from the dialog interface.

9.2 **Select search date:** In the calendar interface click the colorful number to select search date. Click button  again to change search date.

9.3 **Select search channel:** Click Channel number button to select search camera.

9.4  From left to right: Last Frame, Play, Pause, Stop, Next Frame. (Noted: “Last Frame” button don’t work at present because remote search is playing a kind of streaming video)

Always Manual  
Motion Sensor

x<sub>1/16</sub> x<sub>1/8</sub> x<sub>1/4</sub> x<sub>1/2</sub> x1 x2 x4 x8 x16

The screenshot displays a multi-camera surveillance system interface. The main area is a 4x4 grid of 16 camera feeds. Each feed includes a title bar with the camera ID, date, time, and recording status (e.g., 'Camera 11 12/10/2006 8:45:23 AM Always record'). The feeds show various indoor and outdoor scenes, including a control room with a person at a desk, a hallway, and an outdoor night view. The right-hand side features a control panel with a date/time display (Dec 11, 2006 00:01:49), a red stop button, a white play button, a 'ALL' button, a 2x2 grid button, a 3x3 grid button, 'Align' and 'Smart' buttons, a numeric keypad (1-64), and a volume control slider. The bottom of the interface contains playback controls, including a timeline from 0 to 60 seconds, a legend for recording modes (Always, Manual, Motion, Sensor), and a zoom control with settings like x1/16, x1/8, x1/4, x1/2, x1, x2, x4, x8, x16.

## 11 Auto Display Alarm Camera

Refer to Server 6.1 and 6.2

## 12 IP Matrix & TV OUT

### 12.1 What is IP Matrix?

IP Matrix is kind of remote surveillance applying the latest IP Network technology. As mentioned before LDVR System supports multi-point to multi-point network connection. It means that one ILDVR server can support maximum 256 channel connections from different ILDVR LiveCenter and computer running ILDVR Webclient simultaneously. On the other hand one LiveCenter system can support maximum 64 channel connections to different servers simultaneously. More over ILDVR LiveCenter can save 16 groups of pre-saved connections that can be called out in IP-matrix routine. So by using IP-Matrix function, ILDVR LiveCenter can manage  $64 \text{ ch} \times 16 \text{ group} = 1024$  cameras in total.

The key point of IP-Matrix function is to connect / disconnect a certain number of pre-stored connections sequentially from 16-group of connections. The IP-Matrix switch is not only in one group but also between all 16 groups. This function doesn't need ILDVR-3000H4Dx decode card to support.

### 12.2 IP-Matrix setup steps:

- A. Set Auto Switch Interval in SETUP→ IP Setup interface.

A screenshot of a software interface showing the 'IP-Matrix switch interval' setting. The text 'IP-Matrix switch interval' is followed by a text box containing the number '30', a small up/down arrow icon, and the text '(sec.)'.

- B. Set the number of channels (connection windows) in one switch in SETUP→ IP Setup interface.

A screenshot of a software interface showing the 'Number of switch channel' setting. The text 'Number of switch channel' is followed by a text box containing the number '4' and a small down arrow icon.

- C. Turn on channel's IP-Matrix function one by one in SETUP→ Window Setup interface.

Window	IP Address Alias	Camera	Frame Rate	Save Mode	Use IP-Matrix
Window1	test1	Camera13	Auto	Save	Use
Window2	test1	Camera14	Auto	Save	Use
Window3	test1	Camera16	Auto	Save	Use
Window4	test1	Camera16	Auto	Save	Use
Window5	test1	Camera17	Auto	Save	Use

D. Click button  to run IP-Matrix switching in main interface.

### 12.3 TV-Out Setup steps

This function needs ILDVR-3000H4Dx decode card to support. TV Output in LiveCenter is very different from TV Output in ILDVR Server. It doesn't have the matrix switching features. In ILDVR Server the 3000H4Dx decode card gets video source from 3000H4Cx capture card, but in ILDVR LiveCenter the 3000H4Dx decode card gets video source from network video streaming. So please set the IP-Matrix "number of switch channel" to equal the number of TV-out ports, then they can switch at same time.

3000H4Dx decode card supports 2 kinds of video resolution: D1 and CIF. See below:

3000H4D4 = 4-ch D1 TV-out = 8-ch CIF TV-out

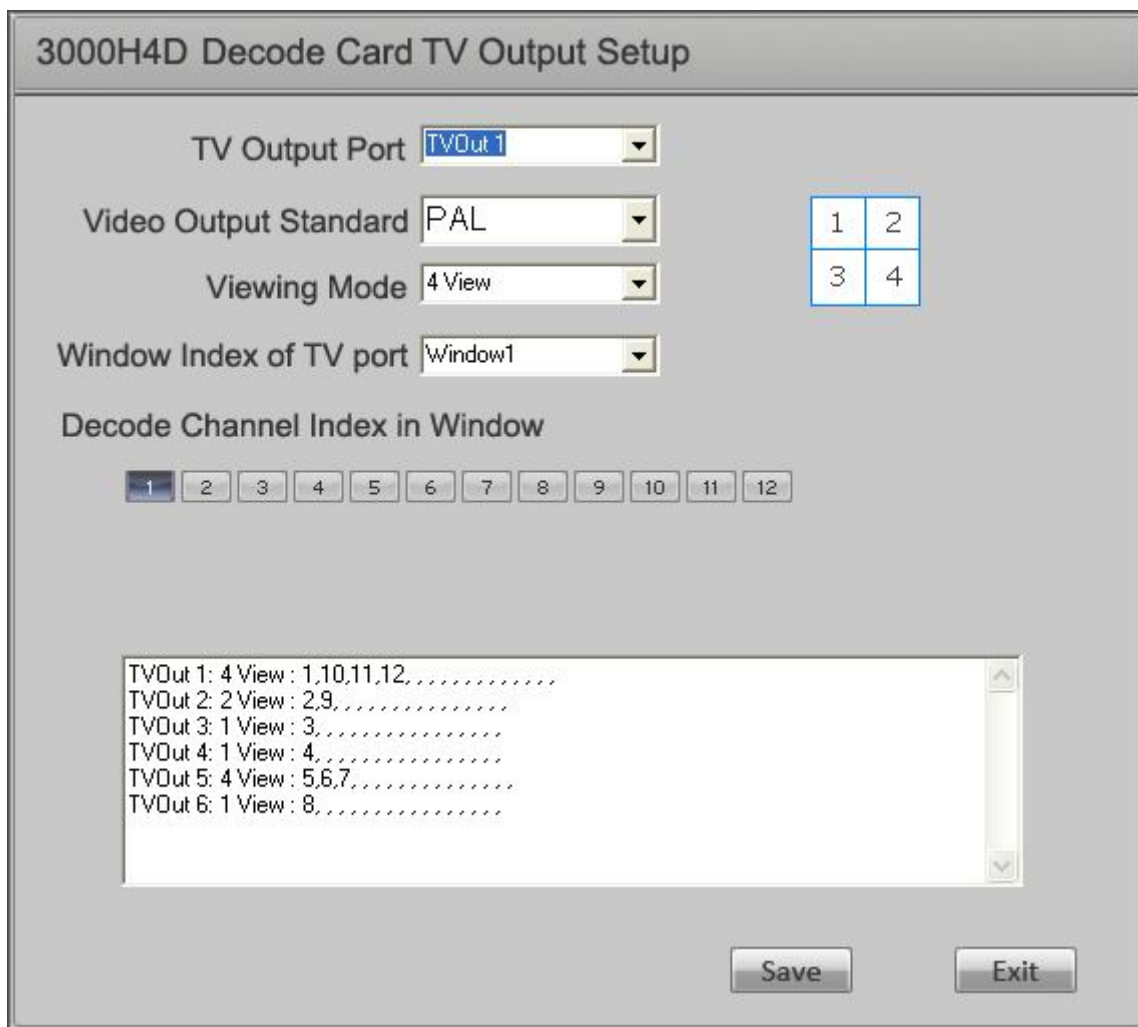

3000H4D2 = 2-ch D1 TV-out = 4-ch CIF TV-out

For example in ILDVR LiveCenter computer with one 3000H4D4 and one 3000H4D2, you can setup a 6 physical channel TV-out system or a 12-logical channel TV-out system.

The key point is that one decode channel can be assigned only one time, but every TV-out port can be configured as 1-window, 2-widow, 4-window, 9-window, 13-window and 16-window viewing mode. If there is not enough decode channel to fulfill the window, they will leave empty. See the CIF TV-out layout as following figures:

Go to SETUP→ IP Setup interface, select "CIF Decode Mode" then click "Setup" button, a new setup interface will popup. Noted: change this setting must exit program and run again.

**Description:**

TV-out port 1 will display ch-1, ch-10, ch-11 and ch-12 in 4-window viewing mode.

TV-out port 2 will display ch-2, ch-9 in 2-window viewing mode.

TV-out port 3 will display ch-3 in 1-window viewing mode.

TV-out port 4 will display ch-4 in 1-window viewing mode.

TV-out port 5 will display ch-5, ch-6, ch-7 in 4-window viewing mode. Window 4 is empty.

TV-out port 6 will display ch-8 in 1-window viewing mode.

When you run IP-Matrix auto switch, the TV-out video will switch corresponding with the IP-Matrix settings.

Noted: When ILDVR LiveCenter computer uses D1 decode resolution but ILDVR Server use 3000H4Cx capture card, the TV Output may lost some frames because 3000H4Cx card is not full D1 card (Video source is about 15fps to 18fps).

### 13 Search Local System Log.

Click button  to view local log. Click “Log Save” to archive system log.

### 14 Search Remote Server System Log.

Click a channel on screen to activate a connection that allows the remote log to be searched.

Click button  to view remote server log. Click “Log Save” to archive system log as other file.

### 15 Exit

Click button  to exit to WINDOWS desktop.

## **Chapter 3**

### **Web Client**

## 1. Connecting via IP address or Domain Name

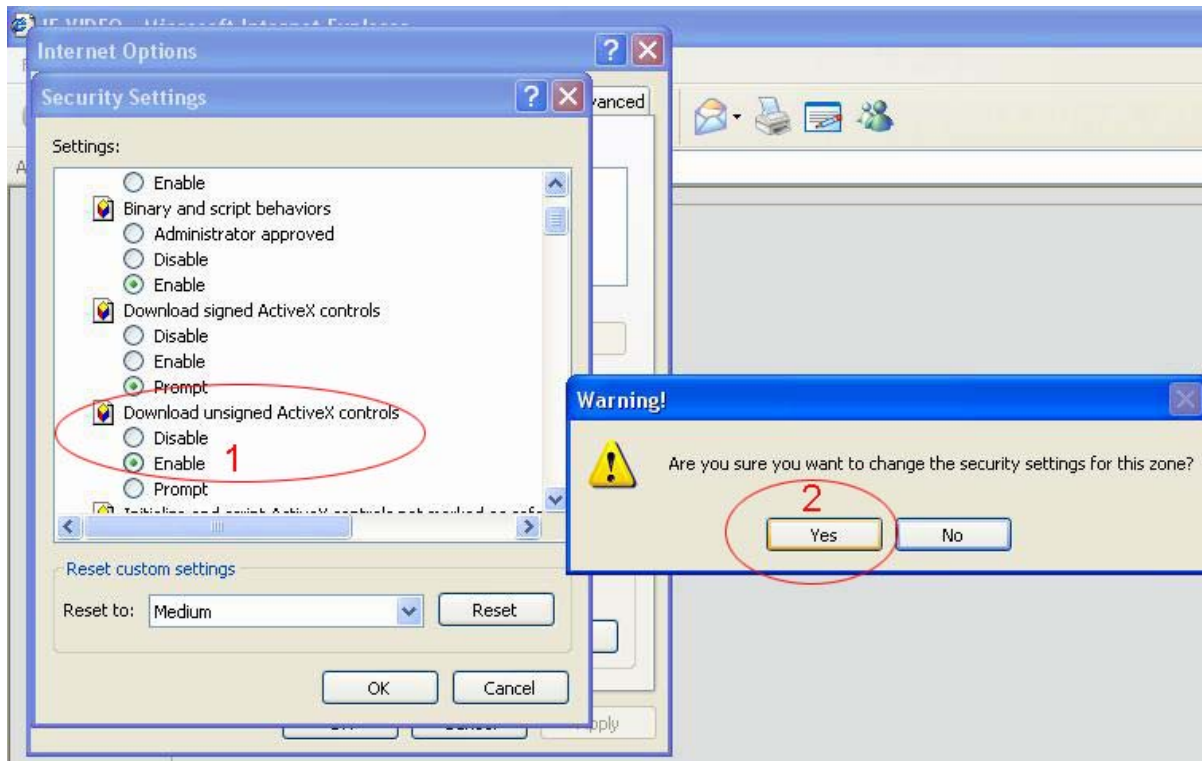

Run Internet Explorer, input the DVR server IP address and web listen port in the IE address box then press Enter key. A Security Warning interface will appear after getting connection with DVR server, this is ActiveX controls and plug-ins installation interface at first time running. Click “Yes” to continue.

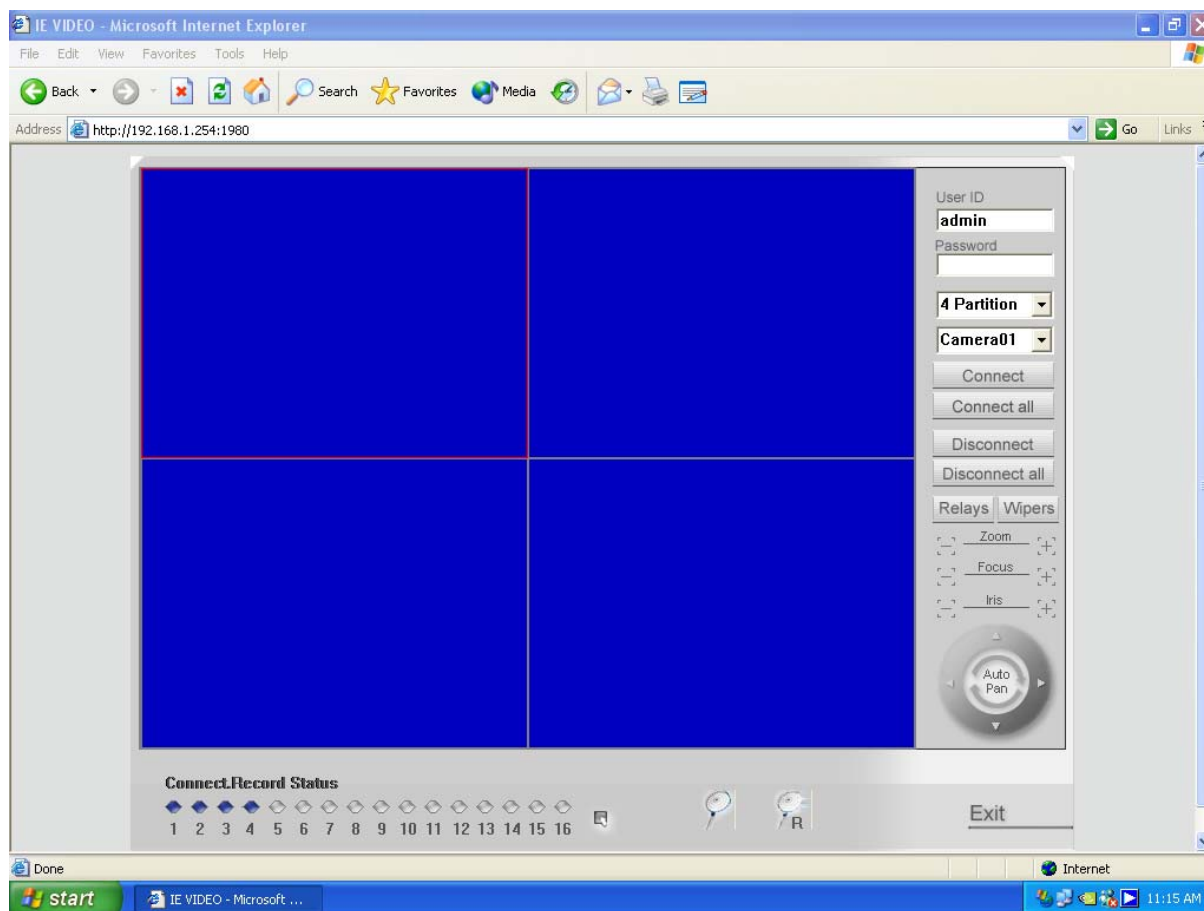

If you have correctly configured the DVR server with DNS/DDNS, you can also input the DVR server domain name and web listen port in the IE address box.

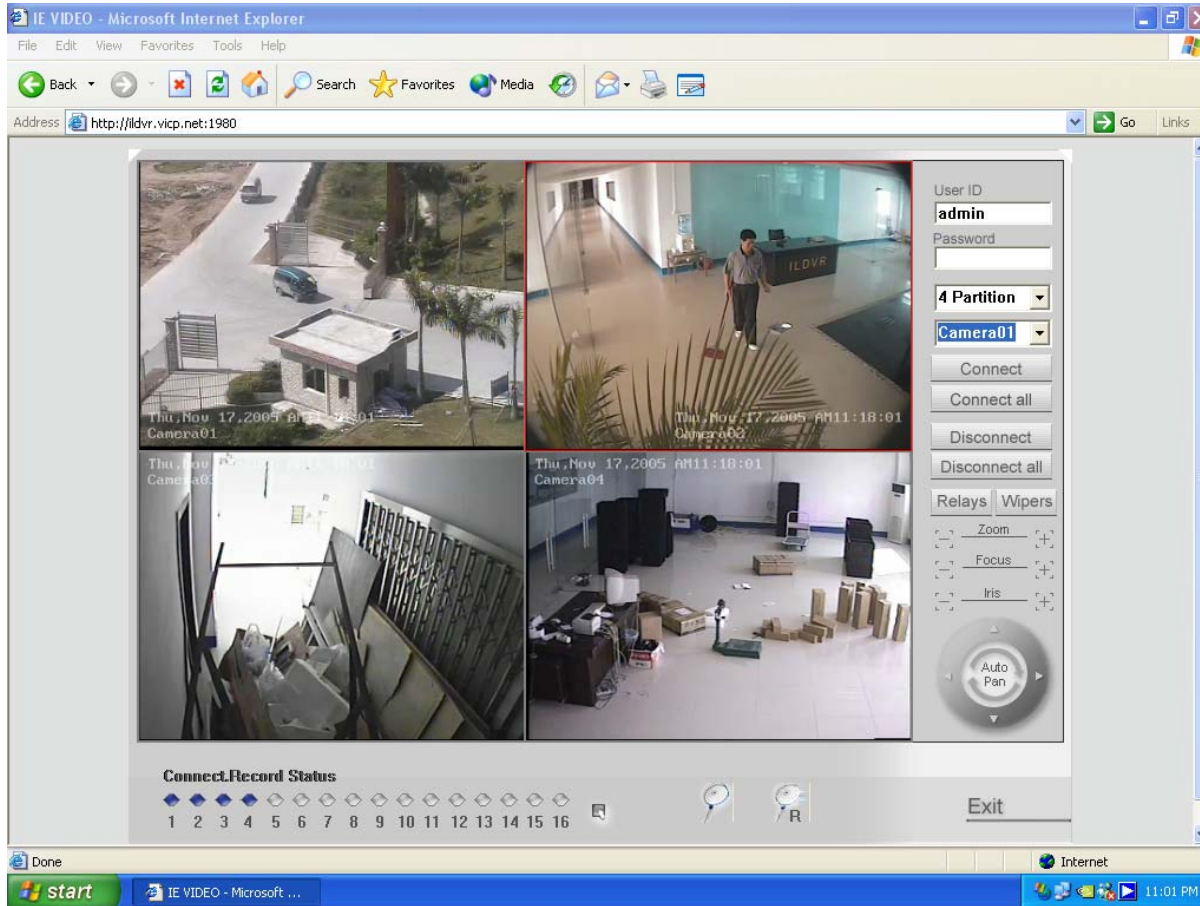

**Windows XP IE security settings prevent users from installing unsigned ActiveX controls. You can change settings to enable downloads of unsigned ActiveX controls, after the installation is finished please change IE security setting again to original settings. See the following 2 figures.**

After installation of ActiveX controls the following web client interface will appear. Click button “Connect” to display camera one by one, click button “Connect all” to show all channels at one time.

## 2. Login to server and control panel

User ID	<input type="text" value="admin"/>
Password	<input type="password"/>

Input user name and password from here if the remote server has configured as “Use password”.

Change display mode and change camera from here.

Connect and disconnect button.

Relay out control button.

Lens control button.

Pan/Tilt control button.

### 3. Remote Record

Channel number, status indicator and button.

Connecting status indicator (Blue color). Clicking it will change it to  (Green color) and this means this camera has begun to record video.

No connection status indicator

Record status indicator (Green color). Clicking it will change it to  (Blue color) and means this camera has stopped recording.

All-change button: click it to change all channel status, click it again to restore status.

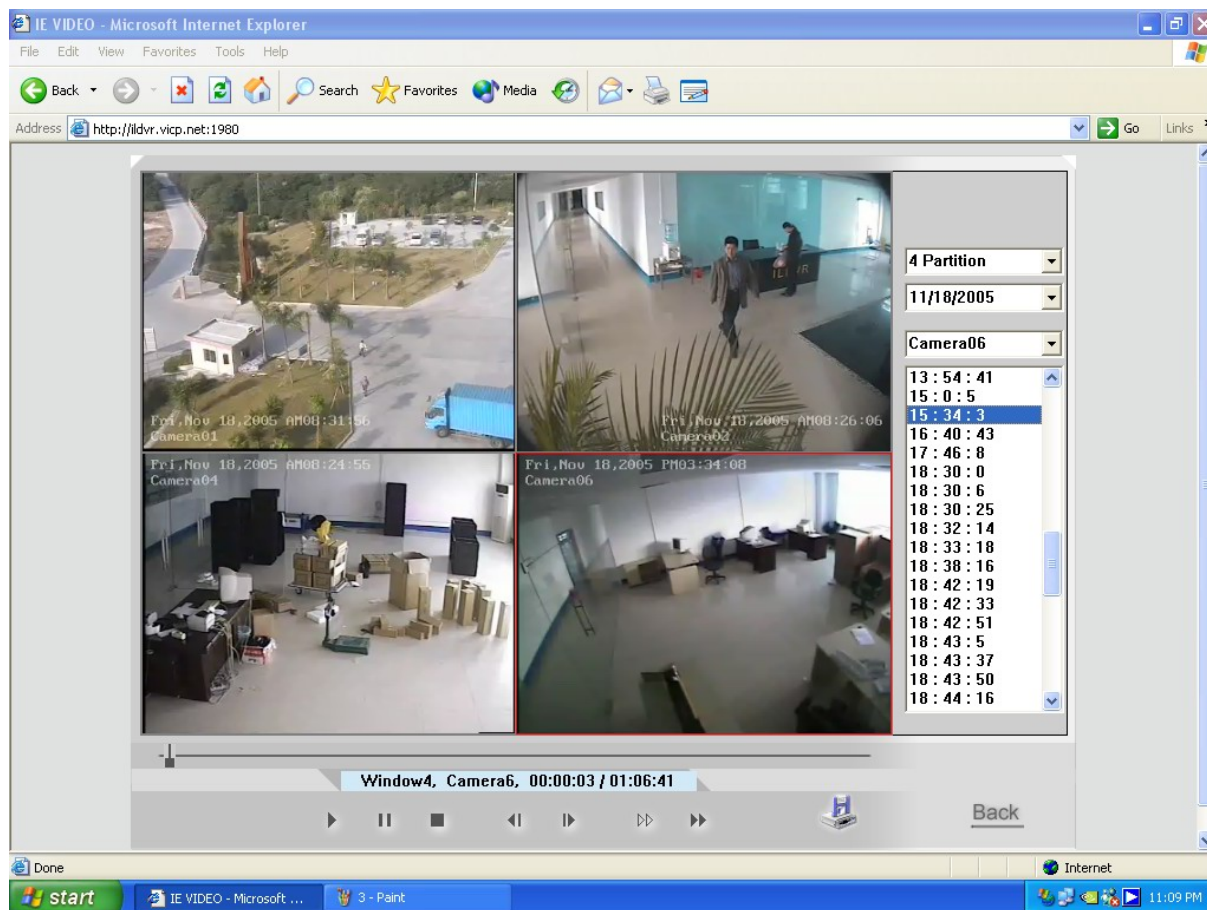

## 4. Remote Search

Click button  to enter Remote Search interface as below: All video displayed is recorded at the DVR server but you can “download” it when you remote playback

by simply clicking the button .

Choosing a certain date and camera all recorded data will list in the right info box. Click any file to display it.

Save button: Click it to save the displayed camera video.

Control buttons from left to right: Play, Pause, Stop, Last Frame, Next Frame, Low Speed Play, Fast Speed Play.

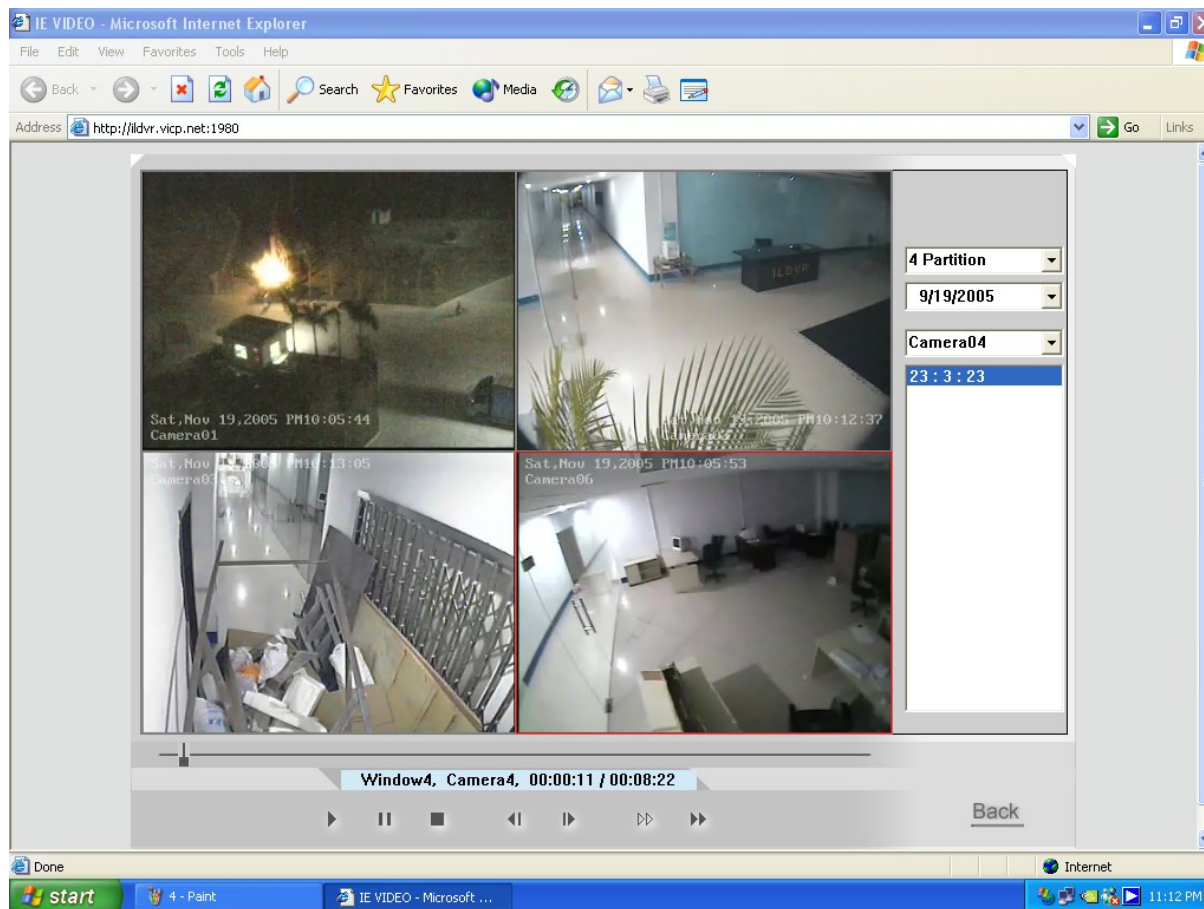

Noted: “Last Frame” button don’t work at present because remote search is playing a kind of streaming video.

## 5. Local Search

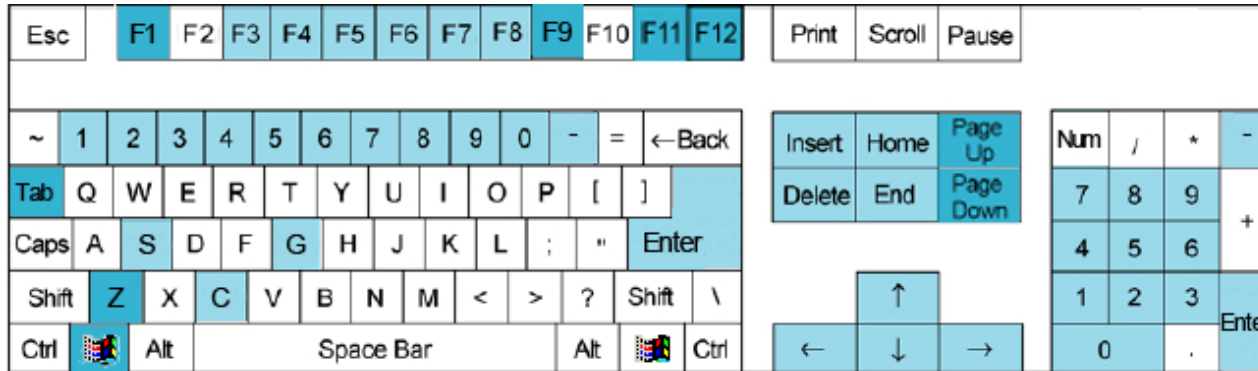

Click button to enter local search interface as below: All displayed video are manually recorded on a local disk via web client.

## **6. Enterprise website solution**

ILDVR offers another web client software (ActiveX Control and plug-ins) in the coming software CD. It supports point-to-multipoint connection. That means web client (IE) can connect up to 16 servers at same time. Experienced users can embed it into their web page with ASP technology (requires User ID and Password to login). For more details please refer to Readme.txt in the Web ActiveX folder of the software CD.

## Appendix A: Keyboard Controller User's Guide

 This color key (light blue) is used to control PTZ.  This color key (dark blue) is used to control other function.

PTZ Control:

Keyboard	Function
↑	UP
↓	DOWNLON
←	LEFT
→	RIGHT
Home	ZOOM IN
End	ZOOM OUT
Insert	FOCUS IN
Delete	FOCUS OUT
S	Save Preset

G, Enter	Call Preset
C, -, Num0-9	Delete Preset
F3-F8	Run Patrol, F3 - F8 means 3 to 8 second interval

Other Control:

Keyboard	Function
F1	System help
Tab	Switch camera / channel
Page Down	Switch to next camera / channel
Page UP	Switch to ahead camera / channel
F9	All cameras record 30 seconds urgently
F11	Single screen enlarge / shrink
F12	Full screen switch
WIN+ Z	Hide screen

## Appendix B: Edit PTZ protocol to run AUTO PAN

Some PTZ protocols do not support AUTO PAN function. To get around this, take protocol PELCO-D (H) for example, open the C:\Program File \ILDVR DVR Server \PTZ\_Lib \Pelco\_D\_H.ini with Notepad.exe. Locate the following sentence:

[AutoOpen]

Start3=0x90

Start4=0x00

Change the Start3 and Start4 value to one of the following value.

[Left] left direction

Start3=0x00

Start4=0x04

[Right] right direction

Start3=0x00

Start4=0x02

## Appendix C: Change card's channel setting again

Change ILDVR-3000H4C card's channel settings after running:

1. Open the file "Sysdata.ini" in the installation folder. ...\\ParaSet\\Sysdata.ini", locate this sentence:

```
[BoardInfo]
iSetBoard=0
```

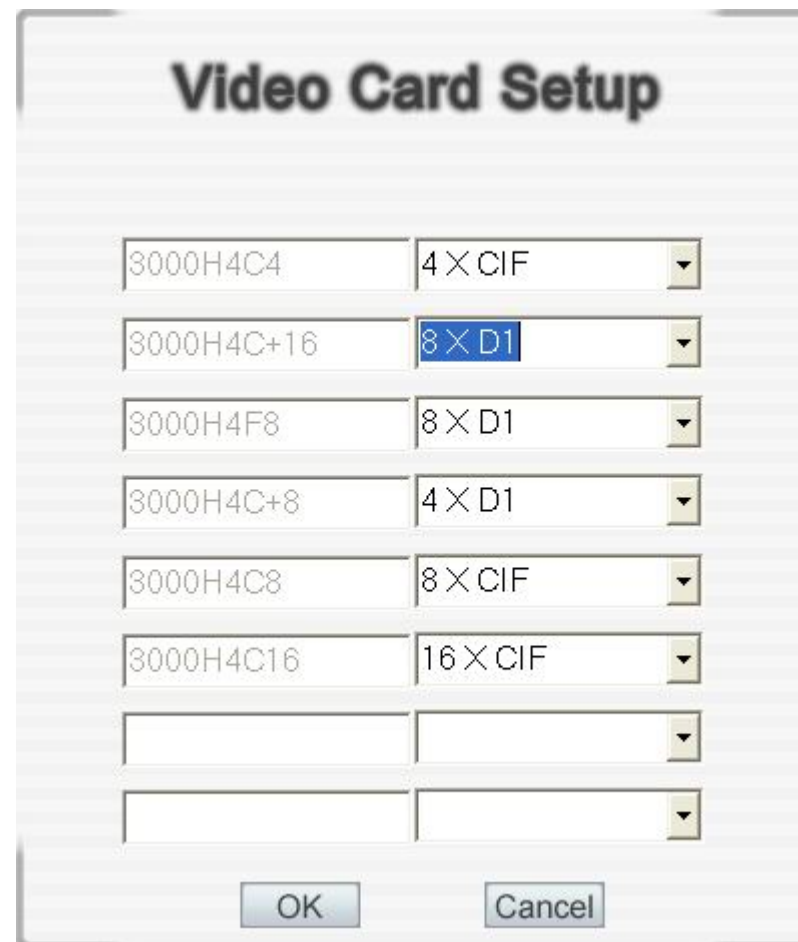

2. Change to " iSetBoard=1 "
3. Run program again

Note:

- ILDVR-3000H4C4, 3000H4C8 support CIF, DCIF and D1 AutoF record resolution. (D1 AutoF is around 15 - 17fps according system performance)
- 3000H4C+4, 3000H4C+8, 3000H4C+16 support CIF, DCIF and D1 record resolution.
- 3000H4C16 only supports CIF record resolution.
- 3000H4F8 only supports D1 record resolution.
- Changing card settings from CIF to D1 will close the even number of channel. For example there is no video input at VID2,VID4,VID6,VID8 when 3000H4C+16 set to 8ch D1 record mode.

Set C and C+ card to D1 resolution steps:

1. By choosing the D1 setting, as in the above figure, the number of video channels will be reduced by half
2. Change camera record image size / resolution to D1 AutoF (C card) / 704×480 (C+ card) in camera setup. See Server 3.2.1.

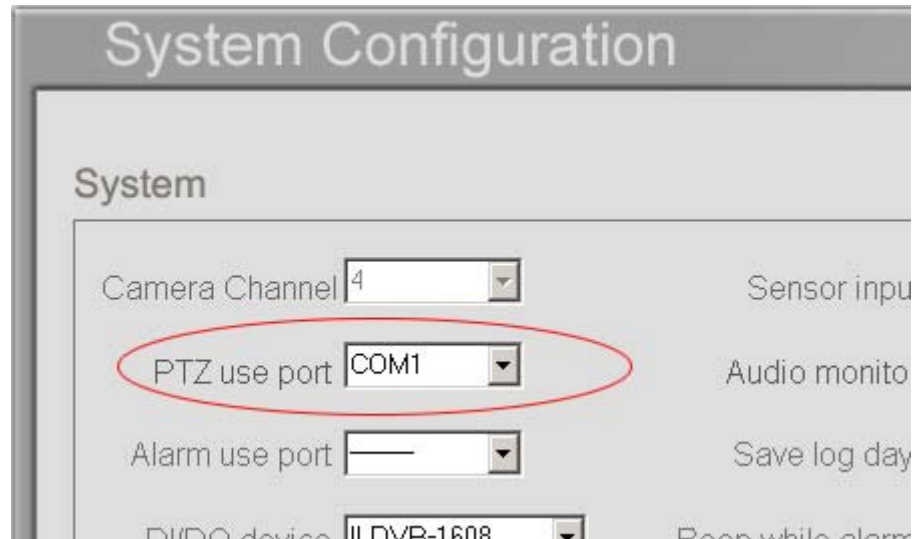

## Appendix D: SC-Series Speed Dome Operation Guide

### 1. Software configuration

1.1 Select Communication port COM1 or COM2.

1.2 Select Protocol Type according to installed Speed Dome Camera. Speed Dome protocols have parenthesis indicator as (H). Refer to speed dome operation manual to set switches of address (ID) and protocol.

## 2. Operation Steps

### 2.1 Open Speed Dome Control Panel and PTZ Control Panel

In main interface click button  to open Speed Dome control panel, Click button  to open PTZ control panel.

Speed Dome Panel

PTZ Panel

## 2.2 Save preset

Use PTZ control panel to adjust speed dome camera to target monitoring spot, select preset number from numeric panel then click SET button.

### 2.3 Delete preset

Click “-” button, select preset number from numeric panel then click SET button.

### 2.4 Call out preset

If preset number is less than 16, call out directly by click the number button in PRESET ZONE.

If preset number is more than 17, call out by click numeric button then click GO.

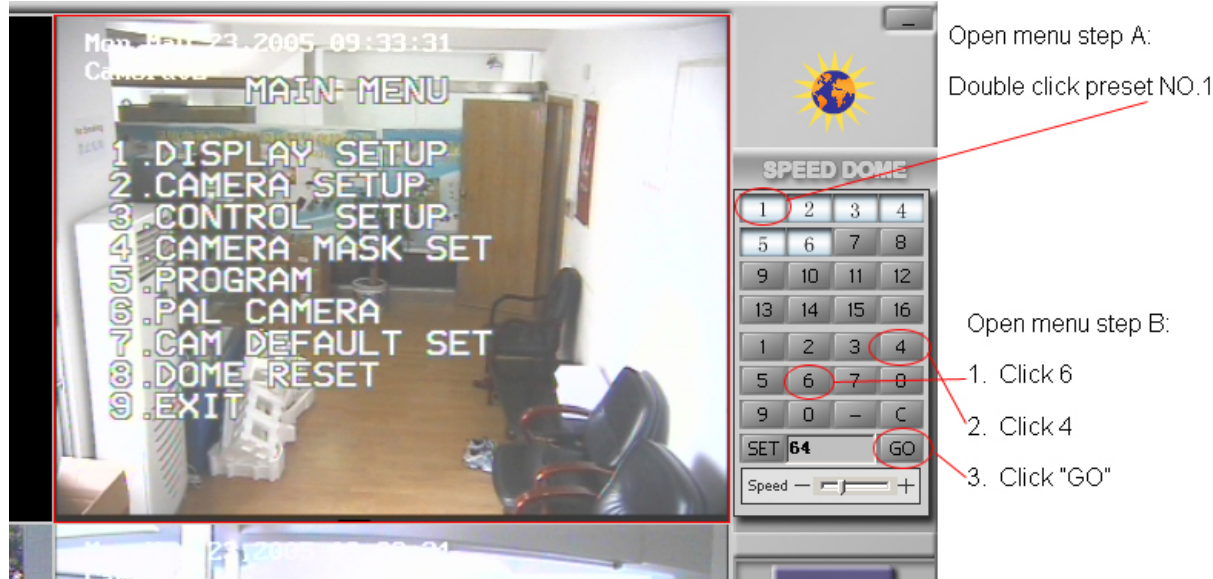

### 2.5 Adjust speed

Click or drag & drop Speed Bar to adjust speed dome moving speed.

## 3. Menu Operation

### 3.1 Open the main menu of the setup

Call No. 64 preset position or double click No. 1 preset position.

### 3.2 Edit/Operate the menu

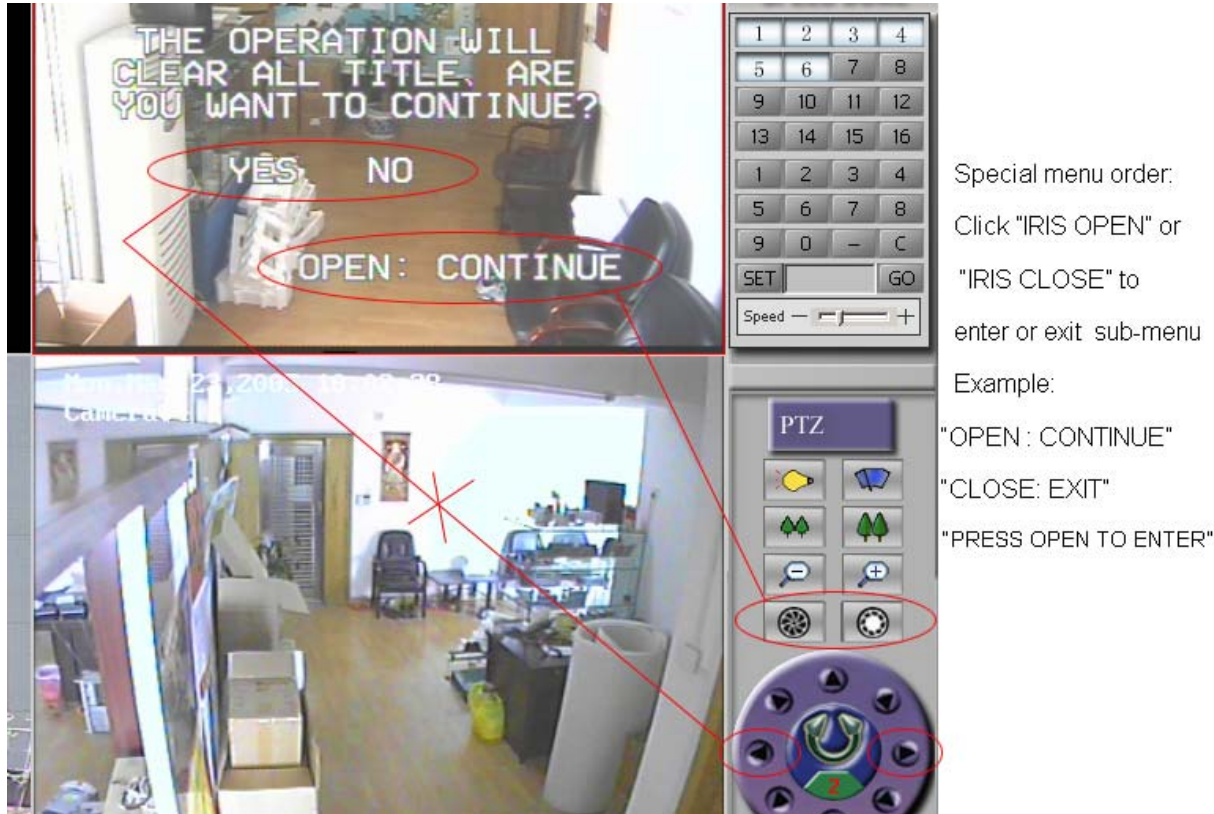

When the main menu is displayed on the screen, click the PTZ panel to edit the menu: Click "TILT UP" or "TILT DOWN" to move the cursor to the option to be set, click "PAN LEFT" or "PAN RIGHT" to modify the content or the order to enter this option.

### 3.3 Special order operation

Some special menu order needs "IRIS OPEN" or "IRIS CLOSE" to finish selection or enter/exit submenu.

Example: "PRESS OPEN TO ENTER", "CLOSE: EXIT", "OPEN : CONTINUE"

### 3.4 Program Options

**AUTO PAN START POS:** To set start position of auto scan between 2 spots. To move the speed dome by clicking PTZ panel then return by clicking "IRIS CLOSE" button.

**AUTO PAN END POS:** To set end position of auto scan between 2 spots. To move the speed dome by clicking PTZ panel then return by clicking "IRIS CLOSE" button.

**RUN AUTO PAN:** Move the cursor to row “RUN AUTO PAN ---“, click “PAN LEFT” or “PAN RIGHT” to adjust moving speed then click “IRIS OPEN” button to start/end AUTO PAN.

**Tips:** If the start position is the same as the end position, it means 360°scan.

**SET TITLE:** To edit titles of preset positions. Refer to speed dome menu for more details.

**SET PATROL:** To edit parameter/data for multi-points patrol. Select No. of patrol by PAN LEFT or PAN RIGHT, enter into edit by IRIS OPEN button, return/exit edit by IRIS CLOSE button.

**RUN PATROL:** To run multi-points patrol function. Select No. of patrol by PAN LEFT or PAN RIGHT, run and exit by IRIS OPEN button.

**RECORD PATTERN:** This pattern can consist of any standard PAN and TILT or lens command. Preset, flip, digital zoom, proportional pan and turbo are not allowed in a pattern. The pattern length is 40 seconds in maximum. To return when 40 seconds expire or by clicking IRIS CLOSE button.

**RUN PATTERN:** To run self-learn loci of tour.

**RETURN:** Return to main menu.

### 3.5 Stop moving

Stop the speed dome moving by click any direction button in PTZ panel.

## 4. Alarm Linkage

Speed Dome can be linked with sensor. It will auto move to corresponding preset when the sensor sends an alarm signal to the system.

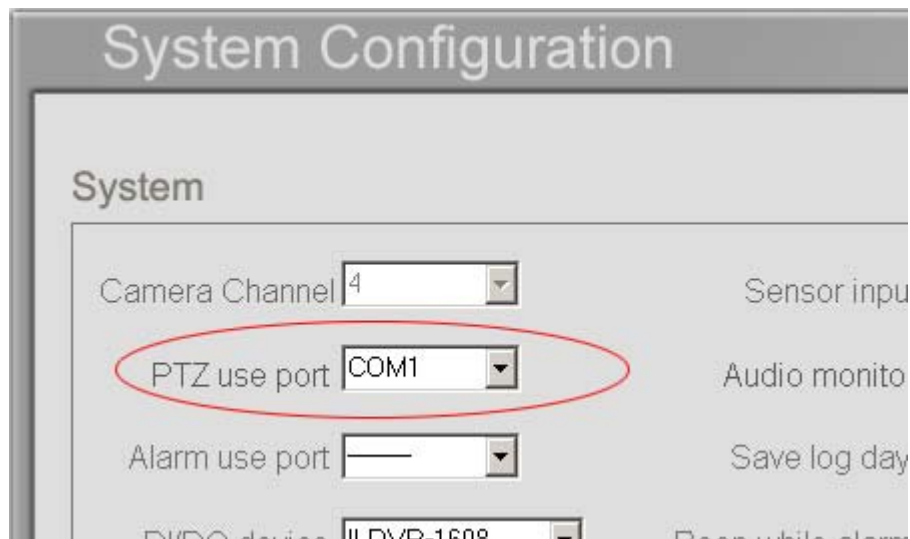

## Appendix E: SD-Series Speed Dome Operation Guide

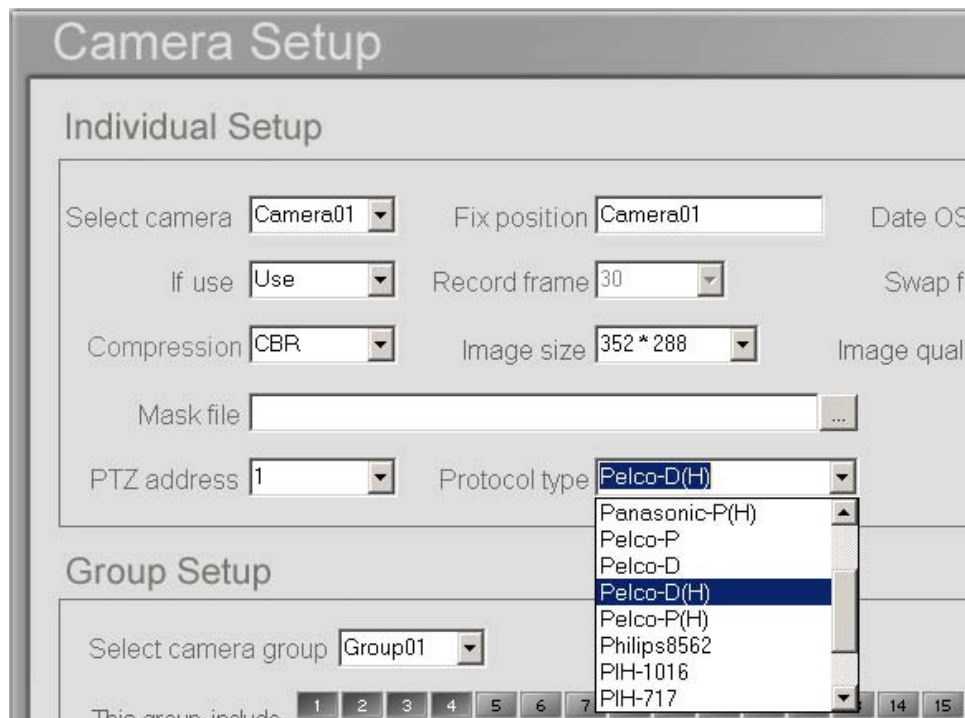

### 1. Software configuration

1.1 Select Communication port COM1 or COM2.

1.2 Select Protocol Type according to installed Speed Dome Camera. Speed Dome protocols have parenthesis indicator as (H). Refer to speed dome operation manual to set switches of address (ID) and protocol.

## 2. Operation Steps

### 2.1 Open Speed Dome Control Panel and PTZ Control Panel

In main interface click button  to open Speed Dome control panel, Click button  to open PTZ control panel.

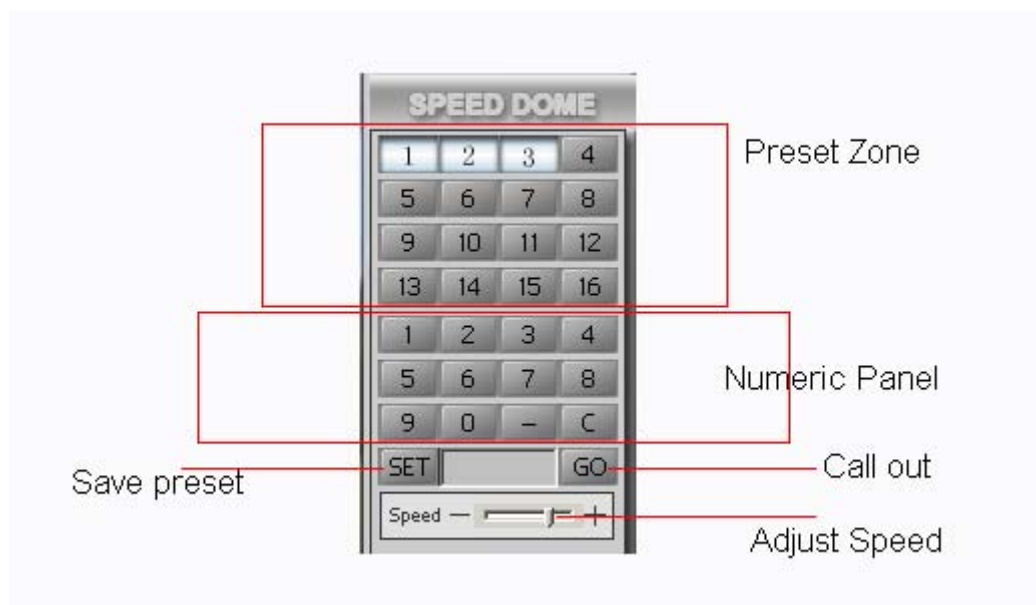

Speed Dome Panel

PTZ Panel

## 2.2 Save preset

Use PTZ control panel to adjust speed dome camera to target monitoring spot, select preset number from numeric panel then click SET button.

### 2.3 Delete preset

Click “-” button, select preset number from numeric panel then click SET button.

### 2.4 Call out preset

If preset number is less than 16, call out directly by click the number button in PRESET ZONE.

If preset number is more than 17, call out by clicking the numeric button then click GO.

### 2.5 Adjust speed

Click or drag & drop Speed Bar to adjust speed dome moving speed.

### 2.6 Auto tracking along with 16 preset

**Start tracking** (stop 3 seconds at each preset)

In numerical panel click “5” + “1” +”SET”,

This is the same as the step of preset 51.

**Start tracking and stop “input” seconds at each preset**

In numerical panel click “-” + “x” +”GO” (x means the second number, for example x=5 means stop 5 second at each preset).

### Stop tracking

In direction panel click any direction button.

### 2.7 Auto pan between any 2 spots

#### Setting:

**A:** Move and adjust the camera to the first spot by using the direction panel, then click “5” + “2” + “SET”.

**B:** Move and adjust the camera to the second spot by using the direction panel, then click “5” + “3” + “SET”.

**Note:** Setting the first spot and the second spot to the same spot will make it rotate 360°

#### Start moving:

**A:** In numerical panel click “5” + “1” +”GO”, it moves at level 1 speed.

**B:** In numerical panel click “5” + “2” +”GO”, it moves at level 2 speed.

**C:** In numerical panel click “5” + “3” +”GO”, it moves at level 3 speed.

#### Stop moving

In direction panel click any direction button.

### 3 Alarm Linkage

Speed Domes can be linked with sensors. The PTZ will auto rotate to the corresponding preset when the sensor sends an alarm signal to the system.

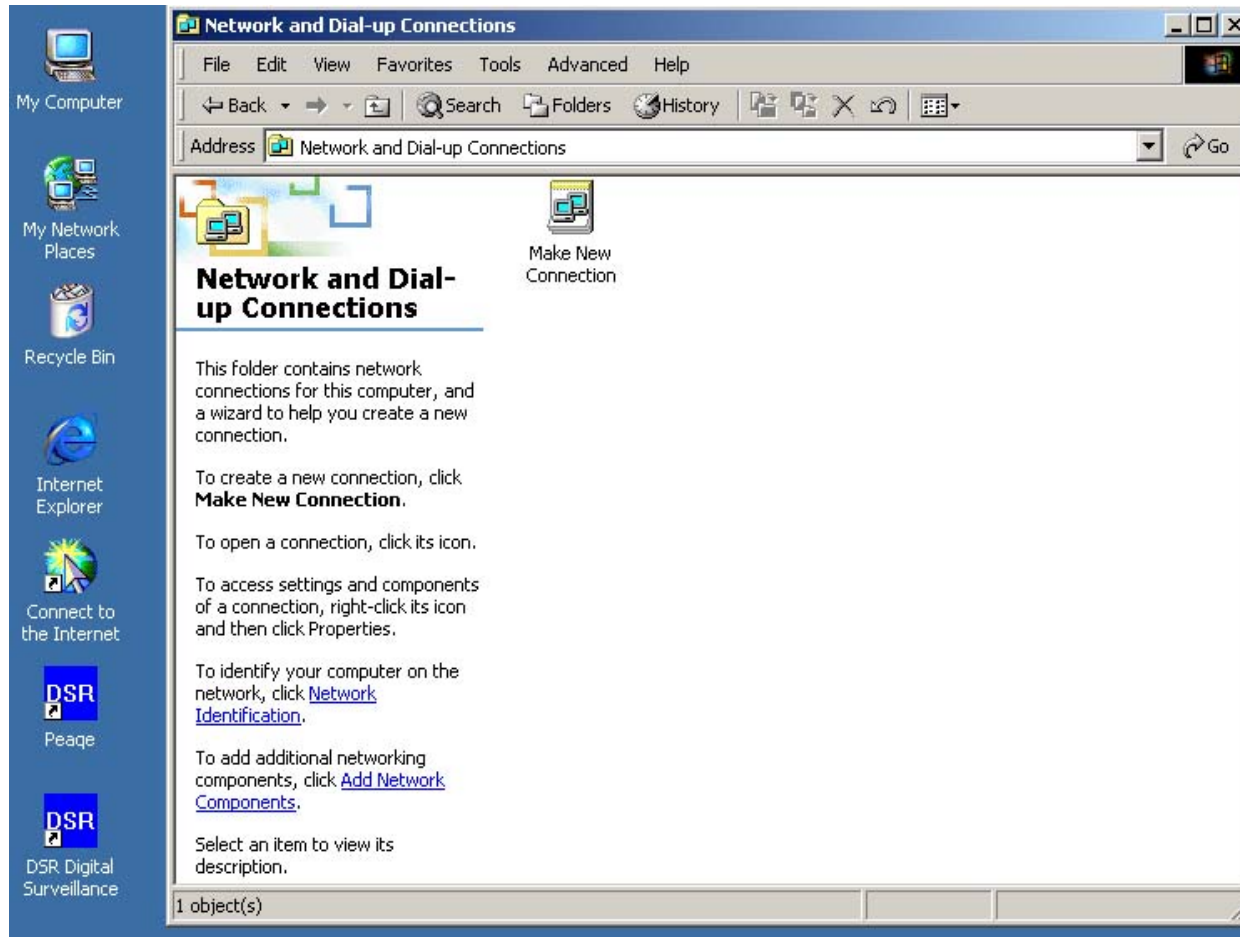

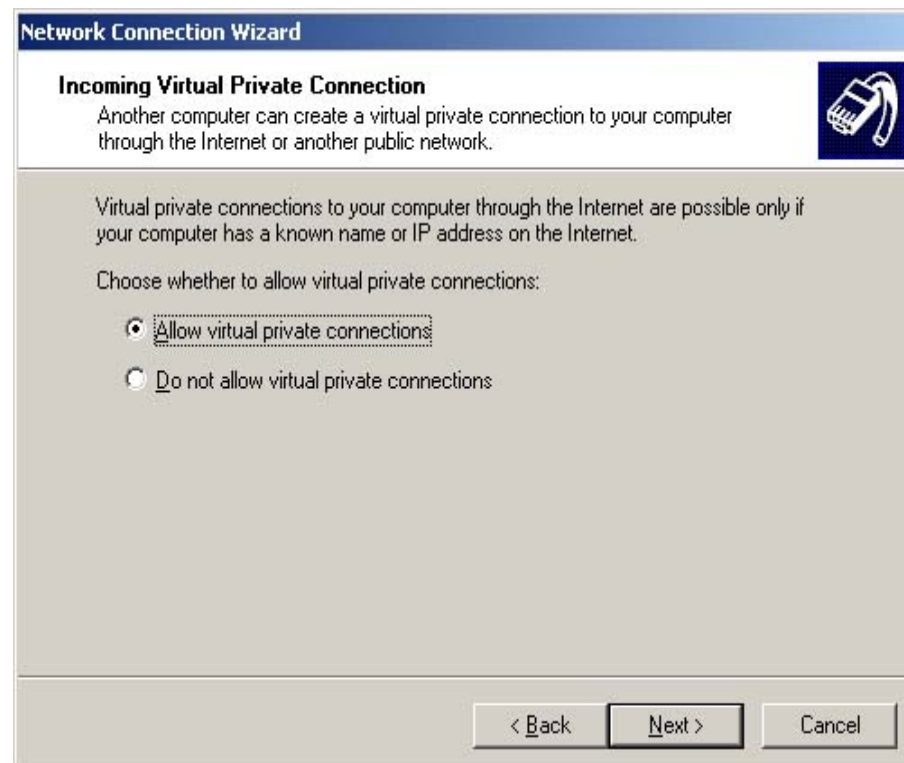

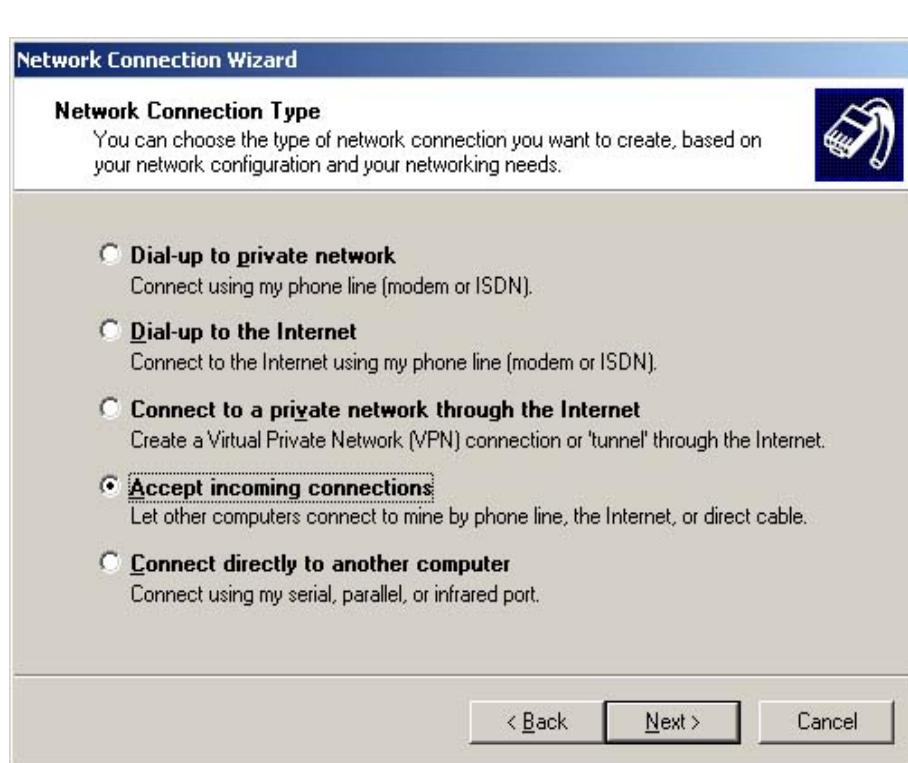

# Appendix F: PSTN Connection Guide

## 1 Dial-up Network Configuration in Server

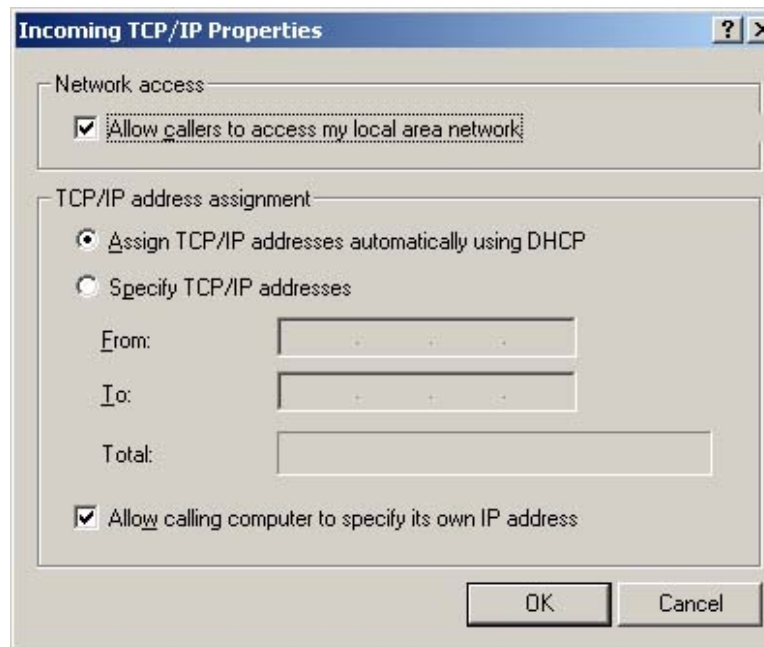

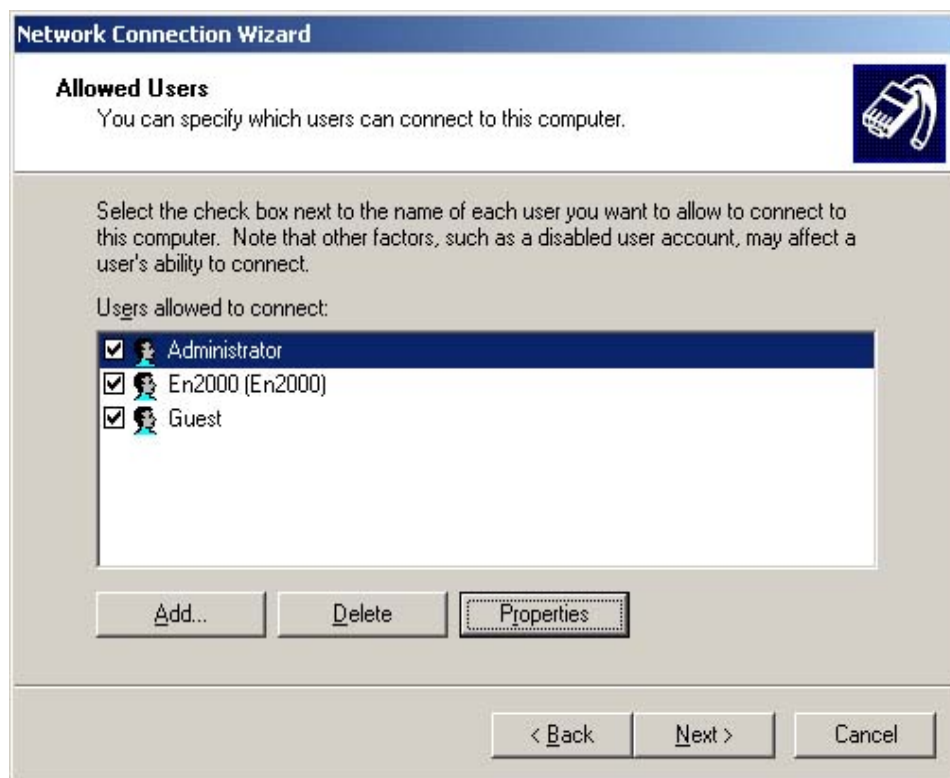

Install MODEM and make a new Dial-up connection.

Select “Accept incoming connections”

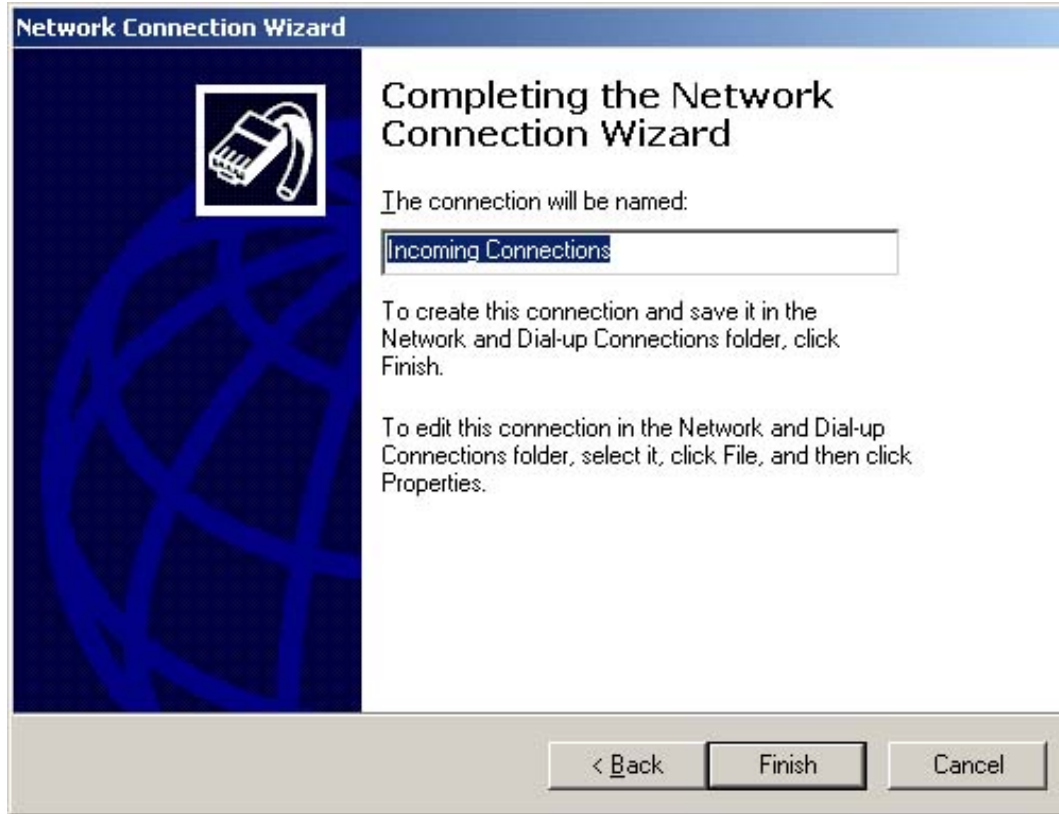

Do the following as shown in the pictures

Click “Add” to add remote user ID. Click “Properties” to change user’s password.

**Note: Do not change the TCP/IP Properties settings in the next picture.**

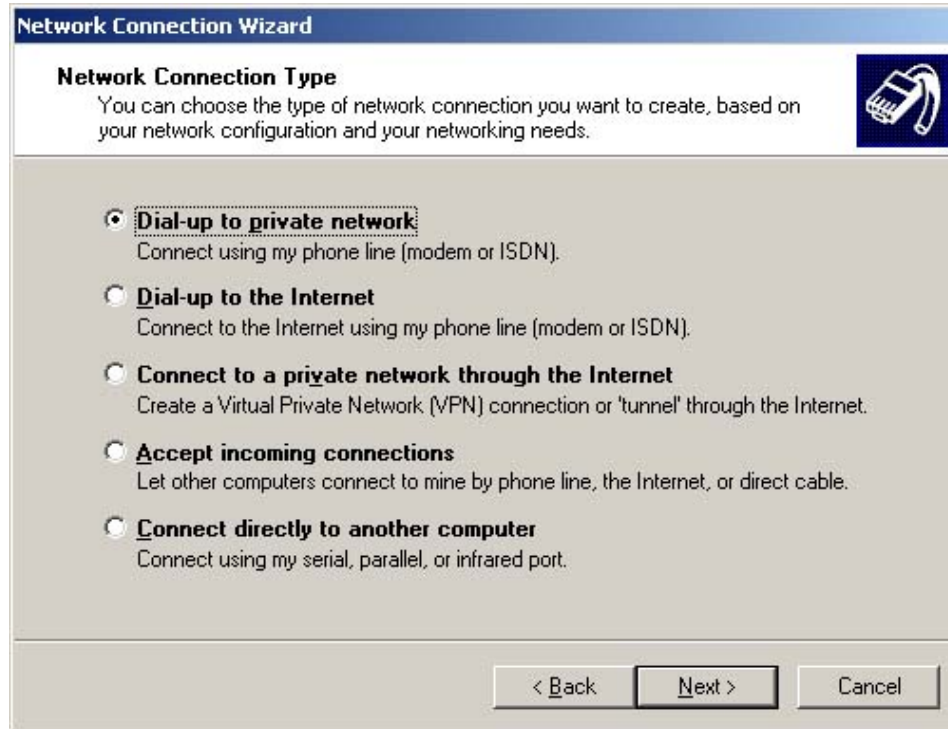

Click "Finish" to end Dial-up networking configuration.

## 2 Dial-up Network Configuration in LiveCenter

Install MODEM and make a new Dial-up connection. Follow these steps:

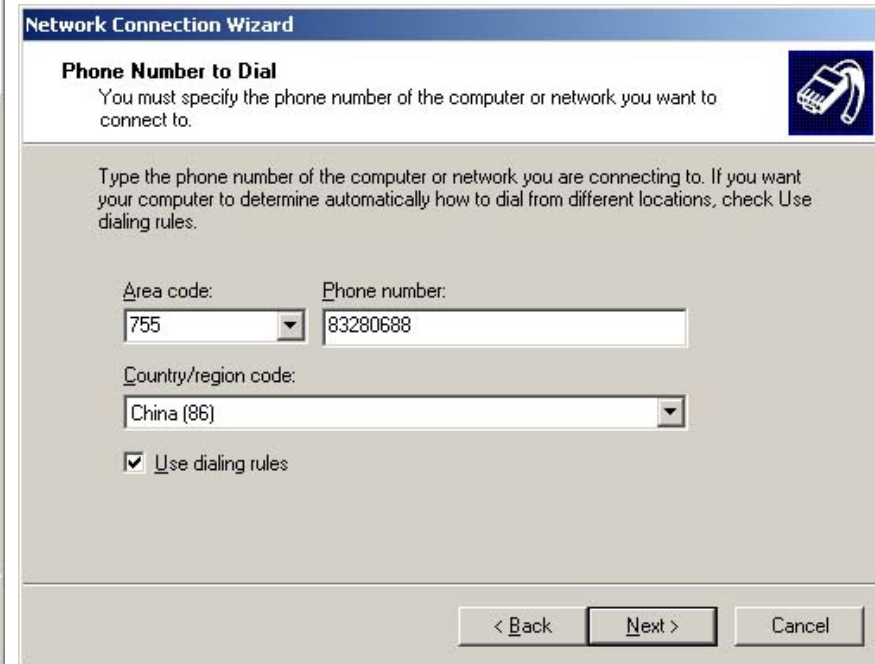

**Network Connection Wizard**

**Network Connection Type**  
You can choose the type of network connection you want to create, based on your network configuration and your networking needs.

- Dial-up to private network**  
Connect using my phone line (modem or ISDN).
- Dial-up to the Internet**  
Connect to the Internet using my phone line (modem or ISDN).
- Connect to a private network through the Internet**  
Create a Virtual Private Network (VPN) connection or 'tunnel' through the Internet.
- Accept incoming connections**  
Let other computers connect to mine by phone line, the Internet, or direct cable.
- Connect directly to another computer**  
Connect using my serial, parallel, or infrared port.

< Back   Next >   Cancel

**Network Connection Wizard**

**Phone Number to Dial**  
You must specify the phone number of the computer or network you want to connect to.

Type the phone number of the computer or network you are connecting to. If you want your computer to determine automatically how to dial from different locations, check Use dialing rules.

Area code: 755   Phone number: 83280688

Country/region code: China (86)

Use dialing rules

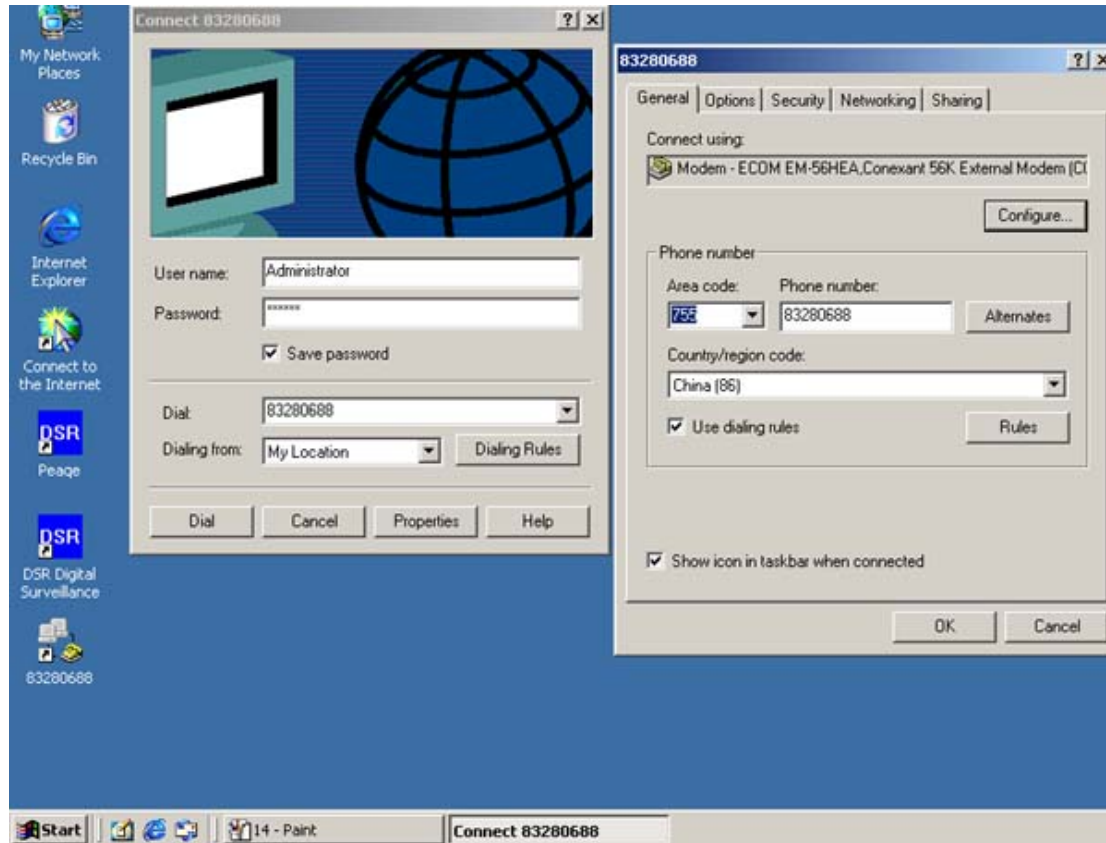

< Back   Next >   Cancel

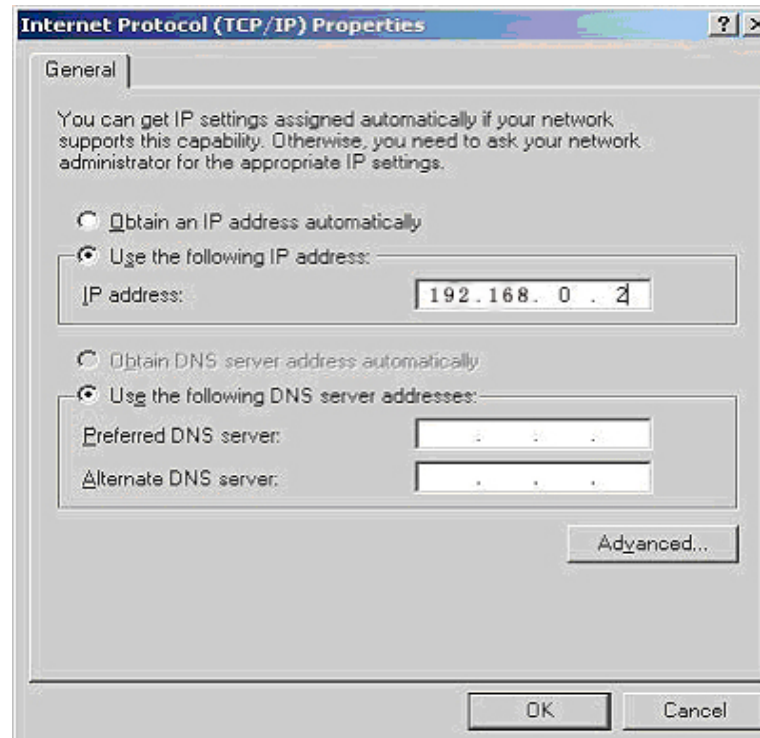

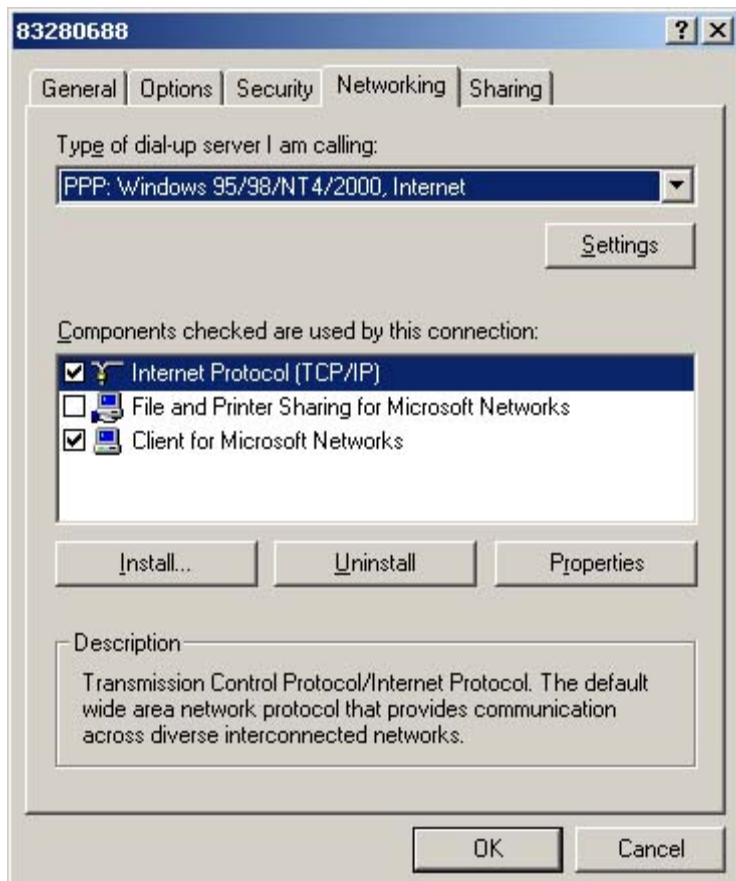

Click “Finish” to end dial-up networking configuration.

Click the shortcut icon on desktop to run Dial-up connection.

**Note:** Click “Properties” first to change settings.

After finishing Properties settings click “Dial” to start connection.

After connecting remote server successfully, run ILDVR LiveCenter software by double clicking the shortcut icon on the desktop, then connect the remote server as a LAN connection. But remember that the server IP address must be set to 192.168.0.1. For other settings please refer to the Users Manual
